

Nomenclature 2010 : premier pas vers l'Europe des compétences IT

Les emplois-métiers du SI dans les grandes entreprises complété par le référentiel européen des compétences ITe-competence framework

Synthèse

Le CIGREF pour la septième fois depuis 1991, a mis à jour sa nomenclature des métiers qui propose une description de métiers existants dans les Directions des Systèmes d'Information (DSI), des grandes entreprises.

Les travaux européens sur les compétences IT

La compétitivité des entreprises en Europe repose pour une grande partie sur une utilisation efficace des technologies de l'information, ce qui impose de disposer des compétences appropriées pour les mettre en œuvre. Dans le cadre du CEN/ISSS (*European Committee for Standardization/Information Society Standardization System*) et avec le support de la Commission Européenne (CE), une structure de pilotage nommée « *ICT-Skills Workshop*» a été constituée dès 2004 pour définir et mettre en œuvre un plan d'action visant à promouvoir le métier d'informaticien dans l'Union Européenne. Cette structure a notamment décidé en 2005 de construire un « référentiel de compétences européen » (European e-competence framework - e-CF) en s'appuyant sur les trois référentiels les plus représentatifs en Europe :

- 1. les descriptifs de compétences (orientés savoir-faire) diffusés par SFIA (UK)
- 2. les profils d'emplois et les processus de développement diffusés par AITTS (D)
- 3. la nomenclature des emplois diffusée par le CIGREF (F)

Une équipe projet, composée d'experts représentants ces trois référentiels, a proposé une approche, un vocabulaire et un cadre pour structurer le nouveau référentiel e-CF. Cette équipe s'est appuyée sur un ensemble important et varié d'experts européens en gestion des ressources humaines et en gestion des systèmes d'information.

Cette équipe a produit en 2010 un référentiel de compétence qui comprend 36 compétences structurées en quatre dimensions qui reflètent les différents niveaux de décision en termes de gestion des ressources humaines, que l'on peut trouver dans une entreprise :

- 1. Les domaines de préoccupation issus des processus business de l'entreprise
- 2. Un ensemble de compétences pour chaque domaine, avec une description générique pour chacune.
- 3. Un niveau de maîtrise de chaque compétence en phase avec les niveaux 3 à 8 définis dans le référentiel de qualification européen (EQF)
- 4. Les connaissances et savoir-faire nécessaires à la réalisation de chaque compétence

L'intégration dans les travaux du CIGREF

A la suite de ses réflexions, débutées en 2002, sur les compétences IT et de sa participation aux travaux européens, le groupe RH du CIGREF a décidé d'intégrer les compétences de l'e-CF dans les

métiers de la nomenclature. Cette dernière avait déjà été mise en forme pour cela dans sa version 2009. En 2010, les fiches métiers ont donc été complétées.

Les 36 compétences décrites dans l'e-CF (sauf *Channel Management* qui ne concerne pas les entreprises utilisatrices) ont été distribuées dans chaque fiche métiers de la nomenclature CIGREF en fonction de la réalité des entreprises du groupe RH. Le travail s'est basé sur les outils et référentiels existants dans ces entreprises.

Une fiche métier contient donc aujourd'hui les descriptions de chaque compétence nécessaire au métier ainsi que le niveau requis pour chacune d'entre elles.

Le référentiel de compétence complet est aussi fourni en annexe.

Aujourd'hui de nombreuses entreprises membres du CIGREF ont adopté la Nomenclature des métiers du CIGREF et plusieurs ont aussi adopté le référentiel européen des compétences IT, e-CF. Cette nouvelle version de la nomenclature saura répondre à leurs besoins

Remerciements

Cette nomenclature est issue des travaux du groupe de réflexion RH du CIGREF piloté par Bertrand ETENEAU, DSI de FAURECIA, et a été élaborée avec la participation du groupe RH composé des personnes et entreprises suivantes :

Frédéric COUTARD - AGIRC ARRCO

Didier LAMBALLAIS - INRIA

Patrice TALMA - AIR FRANCE

Muriel REDER - LA POSTE

Dominique JOURDAIN – AXA

Gilles GALINDO - MICHELIN

Evelyne CHEDHOMME - BANQUE DE FRANCE

Stéphanie CLEMENTINE - POLE EMPLOI

Frédéric DEHESTRU - BOUYGUES TELECOM

Isabelle PERRIEUX - POLE EMPLOI

Stanislas ANDRE - BOUYGUES TELECOM

Etienne DE ROUGÉ - PSA PEUGEOT CITROËN

Ibrahim SIDIBE - CARREFOUR

Marianne DESLOUS - RENAULT

Hubert DELAFON - CIGREF

Christine PUECH - SAGEM Défense

Thérèse HIRSCHY - CNAV

Mireille LENGLET - SNCF

Jean-Pierre GARLATTI - DASSAULT AVIATION

Thierry SELLAN - SAFRAN Informatique

Yves SPIELMANN - EURO DISNEY SCA

Solange THIEBLIN - SAFRAN

Jean-Noël PONZEVERA - FAURECIA

Claude GRANDJEAN - SAFRAN

Florence MIELLE - GROUPAMA SI

Véronique BARDELMANN - SAFRAN

Annie ROZÉ - GROUPAMA SI

Renée PUJOLA - SNECMA

Laurence FOUASSIER - GROUPEMENT DES

Catherine ANCELIN - TOTAL

MOUSQUETAIRES - INTERMARCHÉ

Ce document a été rédigé par Frédéric LAU Directeur de mission au CIGREF

Préambule

Depuis maintenant 19 ans, le CIGREF publie régulièrement une nomenclature des « emploismétiers » des systèmes d'information.

Cet outil est le résultat d'un partage d'expériences entre directeurs des ressources humaines des DSI des entreprises membres du CIGREF formalisé en une description commune des métiers des systèmes d'information de leur entreprise.

Ce travail en commun, régulièrement mis à jour permet aussi un suivi de l'évolution des métiers de la DSI. Cette évolution traduit les changements dans les organisations dont ils font partie. La nomenclature offre donc un éclairage particulier sur l'évolution des DSI.

La première version, élaborée en 1991, proposait quatre familles de métiers issues de l'informatique traditionnelle en entreprise :

- le conseil en système d'information,
- les études et le développement,
- la production et l'exploitation
- l'assistance technique interne

Dans les années 1990-2000, la DSI s'ouvre aux métiers et se professionnalise dans son pilotage : en 1995, la nomenclature fait alors apparaître deux nouvelles familles de métiers :

- le support et l'assistance aux utilisateurs révèlent l'importance croissante accordée par les directions des systèmes d'information à l'utilisateur et à l'entreprise.
- l'administration et la gestion de la DSI reflètent la volonté de soumettre la direction des systèmes d'information aux mêmes contraintes de gestion que l'ensemble de l'entreprise.

En 2000 l'informatique des grandes entreprises était en train de connaître d'importantes évolutions technologiques, stratégiques et organisationnelles. Ces changements se traduisent dans les nomenclatures de 2001 et 2002 :

- par une mise en perspective des possibilités de carrière et un avis du CIGREF sur l'évolution de chaque métier
- par l'apparition de nombreux métiers tels que :
 - le technicien support-SVP qui confirme la prise en compte des utilisateurs au sein des entreprises
 - o les administrateurs d'outils / systèmes / réseaux et télécoms et les administrateurs de bases de données.
 - o le paramétreur ERP qui confirme le déploiement des progiciels
 - o le responsable sécurité du système d'information suite à la prise en compte des problématiques de sécurité identifiées lors de l'an 2000

- l'essor des sites web et d'internet fera apparaître en 2001 le métier de concepteur / développeur internet, qui disparaîtra en 2002,
- le management de la DSI s'étoffe en 2001 en décrivant les métiers de responsable d'exploitation informatique et de responsable d'une entité informatique,
- o en 2002 parce que l'urbanisation du système d'information devient essentielle le métier d'architecte du SI évolue en urbaniste des systèmes d'information.

De nombreuses organisations de l'écosystème IT, entreprises du CIGREF, cabinets de conseils en organisation et gestion des compétences, filières de formation, adoptent alors la nomenclature, s'en sont fortement inspiré ou y font référence.

En 2005, les entreprises membres du CIGREF ont toutes un référentiel des métiers des systèmes d'information opérationnel. Mais la problématique se déplace alors. Elle n'est plus « métiers » mais « compétences » : les évolutions des politiques de ressources humaines des grands groupes qui, pour prendre en compte des phénomènes comme l'évolution des budgets informatiques, des technologies, de la gestion des prestataires, le papy boom ou la mobilité en entreprise, mettent en place au sein de leur DSI des plans ambitieux de gestion des compétences.

En 2005, le CIGREF revisite alors complètement les grilles de compétences de sa nomenclature et envisage l'élaboration d'un nouvel outil : un référentiel de compétences IT, complémentaire de la nomenclature des métiers IT.

Un appel à participer aux travaux sur l'élaboration d'un référentiel de compétences IT international (e-Competence framework ou e-CF) a déplacé cette réflexion au niveau européen. Dans le cadre du CEN/ISSS (European Committee for Standardization/Information Society Standardization System) et avec le support de la Commission Européenne (CE), une structure de pilotage nommée « ICT-Skills Workshop» a été constituée dès 2004 pour définir et mettre en œuvre un plan d'action visant à promouvoir le métier d'informaticien dans l'Union Européenne.

Le CIGREF, avec le groupe RH, a activement participé à l'équipe d'experts qui travaille à la mise en œuvre du *e-Competence framework*. En 2008 cette équipe produisait une première version prototype de cet outil. Au vu des résultats, le CIGREF a alors décidé de compléter la nomenclature du CIGREF en remplaçant les grilles de compétences CIGREF par celles du e-CF.

Aujourd'hui en 2009, la DSI est reconnue comme source de création de valeur, son attractivité augmente, mais en même temps, elle se banalise de plus en plus en devenant une direction comme une autre qui participe au business de l'entreprise. Cette professionnalisation de la DSI se traduit par des changements dans les modèles et les organisations, notamment le passage au mode service qui influe fortement sur l'organisation des métiers.

En 2005, la structuration des métiers de la DSI donnait une vision essentiellement « technique » du système d'information. La réalité des entreprises a changé depuis. Les métiers de la DSI se sont progressivement réorganisés pour passer d'une vision par silos qui mettait en valeur la technicité des métiers, à une vision par couche qui organise les métiers en regard des processus métiers de

l'entreprise, confortant l'idée que les DSI sont, dans une vision globale, en lien avec le business et la stratégie de l'entreprise, et que la place de la DSI n'est plus uniquement technique, qu'elle s'intéresse aussi à l'organisation.

En 2009, la nomenclature évolue donc vers une nouvelle articulation des métiers autour des grandes familles suivantes :

- 1. Pilotage, organisation et gestion des évolutions du système d'information
- 2. Management de projet
- 3. Cycle de vie des applications
- 4. Mise à disposition et maintenance en condition opérationnelle des infrastructures
- 5. Support et assistance aux utilisateurs
- 6. Support méthode, qualité et sécurité
- 7. Management opérationnel

Cette évolution tire les métiers de la DSI vers le haut, leur donnant de la valeur ajoutée et de l'attractivité.

La version 2009 de la nomenclature CIGREF prépare aussi au remplacement des compétences CIGREF par celles, européennes, de l'e-CF : les compétences CIGREF sont alors supprimées des descriptions des métiers et mises en annexe.

De 2008 à 2010, les travaux européens sur le *e-competence framework* continuent, toujours avec la participation active du groupe RH du CIGREF. Une version finalisée est obtenue au printemps 2010. Le CIGREF travaille alors à la répartition des compétences décrites dans l'e-CF dans les métiers de la nomenclature du CIGREF.

C'est l'objet de cette nouvelle version 2010 de la nomenclature des métiers des systèmes d'information du CIGREF.

Organisation de la nomenclature des métiers des systèmes d'information du CIGREF

La nomenclature des métiers des systèmes d'information du CIGREF présente de façon synthétique les principales « missions », « activités et tâches » et « compétences » pour les principaux métiers des technologies de l'information dans les grandes entreprises françaises.

Il présente également le parcours professionnel type (profils et expériences antérieures) et les tendances d'évolution de la fonction.

L'ensemble des métiers est donc organisé en sept familles :

1. Pilotage, organisation et gestion des évolutions du système d'information

Cette famille regroupe tous les métiers qui touchent de manière globale à la mise en cohérence organisationnelle et fonctionnelle du ou des SI.

La plupart de ces métiers travaille avec le *business* dans le respect des orientations stratégiques et ambitions de l'entreprise

2. Management de projet

Cette famille regroupe tous les métiers qui pilotent suivent et coordonnent les projets de développement, déploiement, infrastructure ou méthode Informatique, risques etc.

Ces métiers organisent les travaux, la gestion des ressources et la communication.

3. Cycle de vie des applications

Cette famille regroupe les métiers liés à la conception, au développement et à la réalisation technique et applicative des projets.

Ces métiers n'interviennent pas sur l'organisation des SI mais sur les briques mises en œuvre pour intégrer, concevoir et maintenir les solutions IT.

4. Mise à disposition et maintenance en condition opérationnelle des infrastructures

Cette famille regroupe les métiers liés à l'étude, la conception, le développement, l'intégration et l'exploitation des infrastructures.

Elle comprend aussi les métiers liés au support IT interne à la DSI.

5. Support et assistance aux utilisateurs

Cette famille regroupe les métiers tournés vers l'utilisateur ou usager du SI en termes d'assistance et d'accompagnement.

6. Support méthode, qualité et sécurité

Cette famille regroupe tous les métiers liés à la définition, la mise en place, le contrôle et suivi (audit) des normes et référentiels qualité, méthode et sécurité, en phase avec la gouvernance de la DSI.

7. Management opérationnel

Cette famille regroupe tous les métiers à responsabilité hiérarchique en termes de ressources humaines, de budget, de décision ou de périmètre.

Chaque famille regroupe un ensemble de fiches d'identification des métiers ; pour chacune d'entre elles une trame est proposée présentant :

- l'appellation du métier, les autres appellations courantes ou spécifiques en France et ses équivalences anglo-saxonnes utilisées dans les entreprises ;
- la mission du métier, comprenant les attributions principales, la finalité de cet emploi telle qu'elle doit être prise en compte pour celui qui l'occupe ainsi que la contribution à la performance (au projet, au « métier », à l'entreprise) ;
- la description des activités et tâches significatives telles qu'on les rencontre dans la plupart des organisations ;
- La liste des compétences, issues du référentiel de compétence européen e-CF (fourni en annexe p 165), que l'on observe dans la constitution des métiers IT des entreprises membres.
- les tendances et facteurs d'évolution de l'emploi-métier considéré : contexte stratégique, évolution des marchés et des technologies, utilisation accrue de certains produits et services, évolution des organisations, des clients, du management, de la réglementation... au cours des dernières années comme au cours des prochaines;
- Pour chaque métier, le CIGREF a souhaité indiquer le livrable type que le métier doit produire ainsi que les indicateurs nécessaires pour mesurer la performance du métier. Ces deux derniers points ne sont donnés qu'à titre indicatif et ne sont pas exhaustifs.

Principaux changements par rapport à la nomenclature CIGREF publiée en 2009

Il n'y a pas de changement concernant la description des métiers de la nomenclature entre la version 2009 et 2010.

Les fiches métiers ont été complétées avec les compétences issues de *l'e-competence framework* ou e-CF. Les compétences CIGREF présentes en annexe dans la version 2009 ont été supprimées puisque n'ayant plus lieu d'être.

Origine du projet référentiel de compétence ou e-CF (e-Competence Framework)

Dans le cadre du CEN/ISSS (*European Committee for Standardization/Information Society Standardization System*) et avec le support de la Commission Européenne (CE), une structure de pilotage nommée « *ICT-Skills Workshop*¹ » a été constituée dès 2004 pour définir et mettre en œuvre un plan d'action visant à promouvoir le métier d'informaticien dans l'Union Européenne. La contribution attendue de ces praticiens est déterminante dans l'atteinte des objectifs de croissance fixés à Lisbonne en 2001.

La diversité des pays, des entreprises et organismes représentés dans ce workshop, a été dès le départ un facteur clé de réussite.

Un diagnostic approfondi a permis de dégager, fin 2005, 4 orientations pour la suite des travaux :

- 1. mieux comprendre et définir les compétences dans le domaine des TIC, en particulier dans leur mise en œuvre en entreprise
- 2. clarifier les besoins des employeurs de façon à adapter en conséquence les dispositifs de formation initiale
- 3. poursuivre et développer la formation continue (tout au long de la vie professionnelle)
- 4. établir des relations avec l'EQF (European Qualification Framework)

Les différents référentiels existants en Europe ont été analysés ²:

- ils mélangent souvent les notions de connaissances et de savoir-faire
- ils sont confus au niveau des résultats attendus
- ils ont des finalités très différentes
- ils sont souvent obsolètes, car pas toujours adaptés aux nouvelles technologies, aux nouvelles méthodes de travail et aux nouvelles organisations.

En définitive, courant 2006, il a été décidé de construire un « référentiel de compétences européen » (*European e-competence framework* - e-CF) en s'appuyant sur les trois référentiels les plus représentatifs en Europe :

¹ Pour le *CEN/ISSS and WS on ICT Skills* cf "Setting European Standards on ICT Skills" par P. Schgör in NL - Vol.7, no.1 Spring 2009 et http://www.cen.eu/cenorm/sectors/sectors/isss/activity/wsict-skills.asp

² Cf. document CWA 15515

- 1. les descriptifs de compétences (orientés savoir-faire) diffusés par SFIA (UK)
- 2. les profils d'emplois et les processus de développement diffusés par AITTS (D)
- 3. la nomenclature des emplois diffusée par le CIGREF (F)

Une équipe projet, composée d'experts représentants ces trois référentiels, a proposé une approche, un vocabulaire et un cadre pour structurer le nouveau référentiel e-CF. Cette équipe s'est appuyée sur un ensemble important et varié d'experts européens en gestion des ressources humaines et en gestion des systèmes d'information. E-CF est donc le résultat d'un consensus européen qui a nécessité la participation d'acteurs de l'écosystème IT³, d'entreprises utilisatrices⁴, et de différents organismes liés à l'éducation et à la formation⁵.

Description du e-Competence Framework

Cette équipe projet a produit une première version intermédiaire (e-CF 1.0) en 2008 et la version définitive (2.0) en 2010.

L'utilisation de ce référentiel de compétences européen fournit des bases claires qui peuvent aider les entreprises à prendre les bonnes décisions concernant le recrutement, la gestion des carrières, la formation ou l'évaluation des personnels. Il effectue un lien avec les différents référentiels nationaux et propose une articulation des compétences, connaissances, et savoir-faire IT en phase avec le cadre de travail de l'entreprise.

36 compétences ont été définies. Elles ont été réparties dans une structure comprenant quatre dimensions qui reflètent les différents niveaux de décision en termes de gestion des ressources humaines, que l'on peut trouver dans une entreprise :

- 1. La première dimension s'articule autour de 5 domaines de préoccupation directement issus des processus business de l'entreprise: PLAN, BUILD, RUN, ENABLE et MANAGE.
- 2. La seconde dimension définit un ensemble de compétences pour chaque domaine, avec une description générique pour chacune. Les 36 compétences identifiées comportent une définition générique compréhensible par tous les acteurs européens.
- 3. La troisième dimension spécifie l'un des 5 niveaux de maîtrise et de responsabilité de chaque compétence en phase avec les niveaux 3 à 8 définis dans le référentiel de qualification européen (EQF⁶)
- 4. La quatrième dimension du référentiel est réservée aux connaissances (*knowledge*) et savoir-faire (*skills*). Cette partie fournit un ensemble non exhaustif d'éléments qui permettent de préciser les pré-requis importants qui définissent une compétence donnée.

³ Bitkom, Cisco Systems, SYNTEC Informatique, Deutsche Telekom...

⁴ CIGREF, Bayer Business Services, Airbus, Michelin, NHS, IG Metall...

⁵ EMSI Grenoble, Fondazione Politecnico di Milano, EXIN International...

⁶ European Qualification Framework

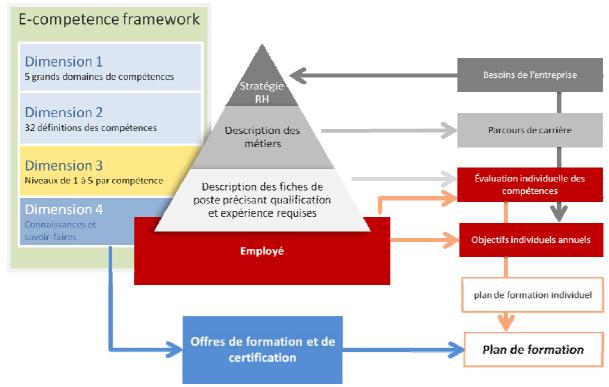

Figure 1: Traduction des besoins de l'entreprise dans le e-CF

Avec cette structure arborescente, les entreprises peuvent satisfaire, avec le niveau approprié de granularité :

- la Gestion Prévisionnelle des Emplois et Compétences (GPEC)
- la gestion collective des emplois et des postes (incluant la qualification)
- le développement individuel des plans de carrière et des compétences
- la gestion du catalogue des formations « poussées » par l'entreprise
- le plan annuel de formation

Pour faciliter l'adoption et la compréhension, le référentiel est accompagné d'un guide d'utilisation qui fournit des recommandations permettant à tout acteur de l'écosystème informatique européen, de le compléter en proposant de nouvelles définitions adaptées à leur secteur d'activité.

Le référentiel est aussi accompagné d'une documentation méthodologique permettant de répondre aux besoins d'un public plus scientifique. Enfin, pour faciliter sa consultation, le référentiel de compétences sera accessible à tout utilisateur européen via un portail européen de services⁸

⁷ "User guidelines for the application of the European e-Competence Framework Disponible sur http://www.ecompetences.eu

⁸ Qui sera ouvert à l'adresse <u>http://www.ecompetences.eu</u>

Les enjeux du e-Competence Framework

Ce référentiel de compétences IT constitue aujourd'hui une base sérieuse pour une norme européenne.

Il est suffisamment générique pour être adaptable aux spécificités des différents pays et aux évolutions technologiques des années à venir.

Il peut contribuer dans chaque pays européen à stabiliser les structures de classification des compétences et des emplois de l'IT et constituer au niveau de l'entreprise, un langage commun pour la définition des emplois, des formations, des parcours de formation, des qualifications, des parcours de carrière, des certifications, etc....

Les utilisateurs potentiels du *e-Competence Framework* sont nombreux : il concerne à la fois les informaticiens qui veulent progresser dans l'exercice de leur métier, les responsables Informatiques et des Ressources Humaines qui cherchent à développer leur personnel et à anticiper sur leurs besoins futurs, les responsables des organismes de formation qui cherchent à faire évoluer leur enseignement et les étudiants qui cherchent des orientations pour guider leur avenir ...etc.

L'intégration du e-Competence Framework dans la nomenclature du CIGREF

Depuis maintenant 5 ans, le CIGREF a fait évoluer sa nomenclature des métiers IT avec pour objectif d'intégrer les compétences du e-CF.

En 2010, lors de la finalisation de l'outil e-CF, le groupe RH du CIGREF s'est réuni au cours de deux sessions pour distribuer chacune des compétences dans les métiers de la nomenclature. Le travail a été effectué en s'appuyant la réalité des entreprises présentes qui ont utilisé les référentiels et descriptions des métiers existants dans leur organisation. Tous les métiers ont été complétés, et toutes les compétences ont été utilisées à l'exception de la compétence D6, *Channel Management*, qui ne concerne pas les entreprises utilisatrices mais celles liées à l'écosystème IT.

Ce document est donc le résultat d'un consensus entre les membres du groupe RH.

La synthèse de la répartition des compétences dans les métiers est consultable en *Annexe 1* : récapitulatif du croisement métiers/compétences (p 161)

Chaque fiche métier a été complétée par les compétences identifiées. Seules les dimensions 1, 2 et 3 ont été intégrées dans les fiches métiers. Les connaissances (knowledge) et les savoir-faire (skills) ne sont pas présents directement dans les fiches métiers afin de faciliter leur lecture. Ils sont néanmoins accessible dans la version complète du référentiel qui se trouve en Annexe 2 : le référentiel de compétences européen (p 165)

1. PILOTAGE, ORGANISATION ET GESTION DES EVOLUTIONS DU SYSTEME D'INFORMATION

Cette famille regroupe tous les métiers qui touchent de manière globale à la **mise en** cohérence organisationnelle et fonctionnelle du ou des SI.

La plupart de ces métiers travaille avec le *business* dans le respect des **orientations stratégiques** et ambitions de l'entreprise

Cette famille comprend les métiers suivants :

- 1.1 Consultant en systèmes d'information
- 1.2 Urbaniste des systèmes d'information
- 1.3 Responsable du système d'information « métier »
- 1.4 Gestionnaire d'applications
- 1.5 Chargé d'affaires internes

1.1 Consultant en systèmes d'information

1/3

Consultant	Chargé d'études informatique	Project Integrator
Conseil en informatique	Chef de projet MOA délégué	Account Relationship Manager

MISSION

Il anticipe et fait mûrir les nouveaux projets par une sensibilisation à l'apport des technologies et une analyse prospective des processus métiers.

Il assiste la maîtrise d'ouvrage pour la définition des besoins et des solutions à mettre en œuvre, dans un souci de meilleure intégration dans le système d'information d'entreprise.

ACTIVITES ET TACHES

Conseil en système d'information	Conseille sur l'optimisation de l'utilisation des outils et des systèmes en place Informe et sensibilise la DG et les directions métiers aux technologies et aux apports des technologies de l'information.
Assistance aux métiers ou au maître d'ouvrage	Effectue des prescriptions et recommandations pour le développement et la mise en œuvre d'un projet ou d'une solution Participe à la définition des spécifications générales des projets Vérifie la cohérence de l'architecture applicative et fonctionnelle et de son évolution Participe à l'évaluation et au choix d'un progiciel Assiste les métiers ou la maîtrise d'ouvrage pour le développement de l'informatique de service Effectue des préconisations sur le management dans le cadre de l'accompagnement d'un projet Participe à la conception du plan d'accompagnement

COMPETENCES (issues du référentiel de compétence européen)

A3. Identifies the needs for organization change and the components required (hardware, software, applications, processes, information and technology platform). Ensures that all aspects take account of interoperability, scalability usability and security.

1.1 Consultant en systèmes d'information

2/3

COMPETENCES (suite)

A6. Application Design

Defines the most suitable ICT solutions in accordance with ICT policy and user/customer needs.

Accurately estimates development, installation and maintenance of application costs.

Selects appropriate technical options for solution design, optimizing the balance between cost and quality.

Identifies a common reference framework to validate the models with representative users

Level 1

Contributes to the design and general functional specification and interfaces.

A8. Sustainable Development

ġ

Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption.

Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy.

Applies an ICT purchasing and sales policy which fulfils eco-responsibilities.

Level 3

Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.

E3. Risk Management

Implements the management of risk across information systems through the application of the enterprise defined risk management policy and procedure. Assesses risk to the organizations business, and documents potential risk and containment plans.

Level 3

Decides on appropriate actions required to adapt security and address risk exposure. Evaluates, manages and ensures validation of exceptions; audits ICT processes and environment

E4. Relationship Management

Establishes and maintains positive business relationships between the client and provider (internal or external) deploying and complying with organizational processes.

Maintains regular communication with client/partner/supplier, and addresses needs through empathy with their environment and managing supply chain communications.

Ensures that client/partner/supplier needs, concerns or complaints are understood and addressed in accordance with organizational policy.

Level 4

Provides leadership for large or many client relationships. Authorizes investment in new and existing relationships. Leads the design of a workable procedure for maintaining positive business relationships

E5. Process Improvement

Measures effectiveness of existing ICT processes. Researches and benchmarks ICT process design from a variety of sources. Follows a systematic methodology to evaluate, design and implement process or technology changes for measurable business benefit.

Assesses potential adverse consequences of process change.

Level 3

Exploits specialist knowledge to research existing ICT processes and solutions in order to define possible innovations.

Makes recommendations based on reasoned arguments

1.1 Consultant en systèmes d'information

LIVRABLES

- Note d'opportunité/fiche d'émergence (permet de connaître s'il est opportun de lancer le projet)
- Note de cadrage
- Dossier de pré-étude
- Spécifications générales

INDICATEURS DE PERFORMANCE

Dans un temps raisonnable :

- le nombre de sollicitations par les métiers
- le nombre de réponses apportées par rapport aux questions posées par les métiers

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
Bac + 5	Plus de 10 ans. Expérience diversifiée. Bonne connaissance des métiers de l'entreprise et des usages qu'elle fait du SI.

TENDANCES ET FACTEURS D'EVOLUTION

Métier situé à la jonction de la maîtrise d'ouvrage et de la maîtrise d'œuvre, qui tend à accueillir des professionnels bénéficiant d'une double compétence (métier et informatique) et capables de répondre aux besoins d'évolution accélérée des systèmes d'information.

1.2 Urbaniste des systèmes d'information

Architecte fonctionnel Architecte de SI Applications Architect

MISSION

Il garantit l'évolution cohérente de l'ensemble du système d'information dans le respect des objectifs de l'entreprise, du domaine fonctionnel et des contraintes externes et internes (de risques, de coûts, de délais...) et en exploitant au mieux les possibilités de l'état de l'art en relation avec l'architecture technique.

ACTIVITES ET TACHES

Conception du système d'information	Gère (construction, mise à jour et évolution) la cartographie du système d'information ou du sous- ensemble du système d'information dont il a la charge Garantit l'intégrité permanente de la cartographie du SI en regard du schéma directeur Spécifie et valide les standards et référentiels d'urbanisation du SI Propose des scénarios d'évolution et de simplification du système d'information en tenant compte des problématiques de décision de gestion, d'évolution de l'offre, d'évolution des besoins, des contraintes d'organisation, etc.
Garantie de la cohérence du système d'information	Évalue la pertinence et la cohérence des projets par rapport à l'architecture cible et aux systèmes existants (par des études d'opportunité, de définition des besoins, de choix d'architecture du système fonctionnel etc.)
Communication	Promeut par des actions de conseil et de communication la cartographie du système d'information auprès des directions métiers et de la DG Travaille en relation étroite et permanente avec, d'une par les directeurs métiers, d'autre par les responsables des domaines fonctionnels et techniques du SI

COMPETENCES (issues du référentiel de compétence européen)

	(133des da rejerentier de competence curopeen)				
	A1. IS and Business Strategy Alignment	Level 4			
Z	Anticipates long term business requirements and determines the IS model in line with organization policy. Makes strategic IS policy decisions for the enterprise, including sourcing strategies.	Provides leadership for the construction and implementation of long term innovative IS solutions.			
PLA	A5. Architecture Design	Level 4			
A.	Specifies, refines, updates and makes available a formal approach to implement solutions, necessary to develop and operate the IS architecture. Manages the relationship with the business stakeholders to ensure that the architecture is in line with business requirements. Identifies the need for change and the components involved; hardware, software, applications, processes, information and technology platform. Ensures that all aspects take account of interoperability, scalability usability and security.	Acts with wide ranging accountability to define the strategy to implement ICT technology compliant with business need. Takes account of the current technology platform, obsolescent equipment and latest technological innovations			

1.2 Urbaniste des systèmes d'information

2/3

COMPETENCES (suite)

A7. Technology Watching

Explores latest ICT technological developments to establish understanding of evolving technologies.

Devises innovative solutions for integration of new technology into existing products, applications or services or for the creation of new solutions.

Level 4

Exploits wide ranging specialist knowledge of new and emerging technologies, coupled with a deep understanding of the business, to envision and articulate the solutions of the future. Provides expert guidance and advice, to the leadership teams in business and in technology, about potential innovations to support strategic decision-making.

A8. Sustainable Development

Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption.

Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy.

Applies an ICT purchasing and sales policy which fulfils eco-responsibilities.

Level 3

Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.

D2. ICT Quality Strategy Development

Defines, improves and refines a formal strategy to satisfy customer expectations and improve business performance (balance between cost and risks). Identifies critical processes influencing service delivery and product performance for definition in the ICT quality management system (ref D.4).

Uses defined standards to formulate objectives for service management, product and process quality.

Identifies ICT quality management accountability.

Level 4

Exploits wide ranging specialist knowledge to leverage and authorise the application of external standards and best practices.

E3. Risk Management

Implements the management of risk across information systems through the application of the enterprise defined risk management policy and procedure. Assesses risk to the organizations business, and documents potential risk and containment plans.

Level 3

Decides on appropriate actions required to adapt security and address risk exposure. Evaluates, manages and ensures validation of exceptions; audits ICT processes and environment

E4. Relationship Management

Establishes and maintains positive business relationships between the client and provider (internal or external) deploying and complying with organizational processes.

Maintains regular communication with client/partner/supplier, and addresses needs through empathy with their environment and managing supply chain communications.

Ensures that client/partner/supplier needs, concerns or complaints are understood and addressed in accordance with organizational policy.

Level 4

Provides leadership for large or many client relationships. Authorizes investment in new and existing relationships. Leads the design of a workable procedure for maintaining positive business relationships

1.2 Urbaniste des systèmes d'information

3/3

COMPETENCES (suite)

E5. Process Improvement

Measures effectiveness of existing ICT processes.

Researches and benchmarks ICT process design from a variety of sources. Follows a systematic methodology to evaluate, design and implement process or technology changes for measurable business benefit.

Assesses potential adverse consequences of process change.

Level 4

Provides leadership and authorizes implementation of innovations and improvements that will enhance competitiveness or efficiency. Demonstrates to senior management the business advantage of potential changes

E7. Business Change Management

Assesses the implications of new IT solutions. Defines the requirements and quantifies the business benefits. Manages the deployment of change taking into account structural and cultural issues. Maintains business and process continuity throughout change, monitoring the impact, taking any required remedial action and refining approach

Level 3

Evaluates change requirements and exploits specialist skills to identify possible methods and standards that can be deployed

E9. IT Governance

Defines, deploys and controls the management of information systems in line with business imperatives. Takes into account all internal and external parameters such as legislation and industry standard compliance to influence risk management and resource deployment to achieve balanced business benefit.

Level 4

Provides leadership for IT governance strategy by communicating, propagating and controlling relevant processes across the entire IT infrastructure.

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

LIVRABLES

- La cartographie du système d'information
- Plans et scénarios d'évolution du SI
- Études d'opportunité

INDICATEURS DE PERFORMANCE

• Mesure de l'agilité et de la réactivité du système d'information à un changement donné (délai de prise en compte des évolutions fonctionnelles du SI suite aux demandes métiers)

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
Bac + 5 ingénieur d'origine « études ».	Minimum 10 ans dans les domaines de la conduite de projet et mise en place réussie de systèmes dans plusieurs domaines fonctionnels.

TENDANCES ET FACTEURS D'EVOLUTION

Ce métier suit la complexification et la rapidité d'évolution des systèmes aussi bien sur un plan technique que fonctionnel.

Il nécessite la capacité à pouvoir intégrer dans le système d'information des éléments exogènes (progiciels, plates-formes de convergence...) et de plus en plus interdépendants.

Il nécessite aussi d'avoir une bonne maîtrise du risque de perte d'intégrité du système d'information dans un contexte d'accélération des évolutions (techniques, concurrentielles, organisationnelles...). Il doit aussi s'adapter en permanence aux évolutions juridiques et fonctionnelles de plus en plus fréquentes.

1.3 Responsable du système d'information « métier »

Responsable de domaine

MISSION

Il pilote l'alignement du système d'information du métier sur les orientations stratégiques et sur les processus métiers, en proposant des scénarios d'évolution du système d'information cohérents avec les objectifs et les processus définis et en garantissant la cohérence globale et dynamique ainsi que la pertinence et la performance du SI du métier.

ACTIVITES ET TACHES

Pilotage stratégique	Contribue à l'optimisation des processus métiers, des données, des applications et des systèmes associés (détection d'opportunités). Participe au pilotage de la performance, notamment économique du SI Promeut par des actions de conseil et de communication la cartographie du système d'information comme un outil d'aide à la décision et au pilotage de la performance Anticipe les changements et leurs impacts métiers sur le SI, et réciproquement Est responsable de la gestion du budget d'informatisation de son domaine
Administration du SI	Formalise, consolide et fait évoluer la cartographie générale du système d'information en s'appuyant sur : > les modèles fonctionnels du métier ; > les architectures des processus du métier ; > les référentiels des informations de base et communes du métier ; > les architectures fonctionnelles du SI (existant/cible) Participe à l'administration du système d'information en termes de référentiels, règles, démarches, méthodologies, objets métier, et outils.
Qualité et conduite de projet	Evalue la cohérence unitaire et globale (portefeuille) des projets par rapport au système d'information (existant/cible) Consolide les écarts en termes de délais, de coûts ou de qualité Capitalise l'ensemble des connaissances sur le système d'information du métier : Garantit la qualité de la conduite de projet Gère la cartographie des compétences nécessaires à l'évolution du SI

COMPETENCES (issues du référentiel de compétence européen)

A1. IS and Business Strategy Alignment

Anticipates long term business requirements and determines the IS model in line with organization policy. Makes strategic IS policy decisions for the enterprise, including sourcing strategies.

Level 4

Provides leadership for the construction and implementation of long term innovative IS solutions.

1.3 Responsable du système d'information « métier »

2/4

COMPETENCES (suite)

A2. Service Level Management

Defines, validates and makes applicable service level agreements (SLA) and underpinning contracts for services offered. Negotiates service performance levels taking into account the needs and capacity of customers and business.

Level 3

Influences and prepares the final Service Level Agreement (SLA) and accounts for the final content.

A3. Business Plan Development

Addresses the design and structure of a business or product plan including the identification of alternative approaches with return on investment propositions. Consider the possible and applicable sourcing models

Presents cost benefit analysis and reasoned arguments in support of the selected strategy.

Ensures compliance of business and technology strategies.

Communicates and sells business plan to relevant stakeholders and addresses political, financial, and organizational interests, including SWOT analysis.

Level 4

Provides leadership for the creation of an information system strategy which meets the requirements of the business.

A8. Sustainable Development

Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption.

Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy.

Applies an ICT purchasing and sales policy which fulfils eco-responsibilities.

Level 3

Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.

D9. Personnel Development

Diagnoses individual and group competence, identifying skill needs and skill gaps. Reviews training and development options and selects appropriate methodology taking into account the needs of the individual and the business. Coaches and/or mentors individuals and teams to address learning needs.

Level 4

Takes proactive action and develops organisational processes to address the development needs of individuals, teams and the entire workforce.

D10. Information and Knowledge Management

Identifies and manages structured and unstructured information and considers information distribution policies.

Creates information structure to enable exploitation and optimization of information for business benefit.

Understands appropriate tools to be deployed to create, extract, maintain, renew and propagate business knowledge in order to capitalize from the information asset.

Level 5

Correlates information and knowledge to create value for the business. Applies innovative solutions based on information retrieved.

1.3 Responsable du système d'information « métier »

3/4

COMPETENCES (suite)

E2. Project and Portfolio Management

Implements plans for a programme of change.

Plans and directs a single or portfolio of ICT projects to ensure co-ordination and management of interdependencies.

Orchestrates projects to develop or implement new, internal or externally defined processes to meet identified business needs.

Defines activities, responsibilities, critical milestones, resources, skills needs, interfaces and budget.

Develops contingency plans to address potential implementation issues.

Delivers project on time, on budget and in accordance with original requirements. Creates and maintains documents to facilitate monitoring of project progress.

Level 4

Exploits wide ranging skills in project management to work beyond project boundary.

Manages complex projects or programmes, including interaction with others. Influences project strategy by proposing new or alternative solutions. Takes overall responsibility for project outcomes, including finance and resource management. Is empowered to revise rules and choose standards.

E3. Risk Management

Implements the management of risk across information systems through the application of the enterprise defined risk management policy and procedure. Assesses risk to the organizations business, and documents potential risk and containment plans.

Level 2

Understands and applies the principles of risk management and investigates ICT solutions to mitigate identified risks

E4. Relationship Management

Establishes and maintains positive business relationships between the client and provider (internal or external) deploying and complying with organizational processes.

Maintains regular communication with client/partner/supplier, and addresses needs through empathy with their environment and managing supply chain communications.

Ensures that client/partner/supplier needs, concerns or complaints are understood and addressed in accordance with organizational policy.

Level 4

Provides leadership for large or many client relationships.
Authorizes investment in new and existing relationships. Leads the design of a workable procedure for maintaining positive business relationships.

E5. Process Improvement

Measures effectiveness of existing ICT processes.

Researches and benchmarks ICT process design from a variety of sources. Follows a systematic methodology to evaluate, design and implement process or technology changes for measurable business benefit.

Assesses potential adverse consequences of process change.

Level 3

Exploits specialist knowledge to research existing ICT processes and solutions in order to define possible innovations. Makes recommendations based on reasoned arguments

E6. ICT Quality Management

Implements ICT quality policy to maintain and enhance service and product provision.

Plans and defines indicators to manage quality with respect to ICT strategy. Reviews quality performance indicators and recommends enhancements to influence continuous quality improvement.

Level 2

Communicates and monitors application of the organizations quality policy

1.3 Responsable du système d'information « métier »

4/4

COMPETENCES (suite)

E7. Business Change Management

Assesses the implications of new IT solutions.

Defines the requirements and quantifies the business benefits.

Manages the deployment of change taking into account structural and cultural issues.

Maintains business and process continuity throughout change, monitoring the impact, taking any required remedial action and refining approach

Level 4

Provides leadership to plan, manage and implement significant IT led business change

E9. IT Governance

Defines, deploys and controls the management of information systems in line with business imperatives.

Takes into account all internal and external parameters such as legislation and industry standard compliance to influence risk management and resource deployment to achieve balanced business benefit.

Level 5

Defines and aligns the IT governance strategy incorporating it into the organizations corporate governance strategy. Adapts the IT governance strategy to take into account new significant events arising from legal, economic, political, business or environmental issues.

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

LIVRABLES

- L'ensemble des PV de recette planifiés
- Le suivi de portefeuille de projets

INDICATEURS DE PERFORMANCE

- Nombre de demandes d'évolution ou de corrections
- Degré de satisfaction du client
- Niveau de disponibilité des systèmes
- Tenue des budgets

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
Bac + 5 informatique ou management.	Cadre supérieur ayant une expérience de 10 à 15 ans minimum dans un ou plusieurs domaines de l'entreprise et ayant suivi des projets informatiques soit en tant que maîtrise d'ouvrage (chef de projet MOA), soit en tant que maîtrise d'œuvre (chef de projet MOE) afin d'avoir la double compétence fonctionnelle et informatique nécessaire à la maîtrise de son domaine.

TENDANCES ET FACTEURS D'EVOLUTION

Ce métier suit la complexification et la rapidité d'évolution des systèmes aussi bien sur un plan technique que fonctionnel.

Il nécessite la capacité à pouvoir intégrer dans le système d'information des éléments exogènes (progiciels, plates-formes de convergence...) et de plus en plus interdépendants.

De plus en plus orienté vers la recherche de l'amélioration de la qualité des relations entre les métiers, la MOA (quand elle existe) et la MOE.

Il doit associer le développement des démarches d'urbanisation fonctionnelles dans le pilotage du SI

1.4 Gestionnaire d'applications

1//

Pilote général de systèmes	Gestionnaire processus / produits	Gestionnaire du SI
Pilote d'applications		

MISSION

Le gestionnaire d'applications a pour objectif d'améliorer la performance, de contribuer au fonctionnement et de participer à la gestion et à l'évolution du système d'information du métier pour la mise en cohérence avec les orientations, les modes de fonctionnement et les processus définis au niveau du métier.

ACTIVITES ET TACHES

Conception d'évolution du système d'information	Représente les métiers ou maîtres d'ouvrage lors de la vie courante des systèmes Participe à l'élaboration des règles de fonctionnement et d'utilisation du système d'information Contribue à la construction et à l'utilisation du SI et de son évolution : Pen proposant des améliorations, en participant à la gestion des idées et des propositions, en participant aux projets d'adaptation et d'évolution du SI, en participant aux recettes opérationnelles
Mise en œuvre du système d'information	Effectue les actions et processus de gestion courante du système d'information en place dans toutes ses dimensions (assistance, gestion des incidents, qualité de service, contrats, satisfaction, formation) Participe activement au développement de l'usage du système d'information Contribue, en cohérence avec la stratégie du métier, à l'évolution des processus et du système d'information. Prête notamment attention, dès l'expression des besoins, à l'exploitabilité du futur système dans toutes ses dimensions (cahier de recette, acceptation, coûts, performance, ergonomie, cohérence fonctionnelle)
Qualité du SI (performance, cohérence, coût, délai)	Coordonne et anime le réseau des acteurs liés au fonctionnement du SI du métier Garantit le maintien de la qualité de fonctionnement d'ensemble et de la performance du système d'information du métier par des actions appropriées (ou des applications dont il a la charge) Respecte les règles de fonctionnement et d'utilisation du SI en conformité avec les normes et standards du métier et de l'entreprise, et en accord avec les contrats de service définis. Est responsable de la documentation (note de cadrage, cahier des charges, guide de procédure) des applications dont il a la charge Est responsable du contrôle et des règles de fonctionnement et d'utilisation des applications dont il a la charge Participe à la maîtrise des coûts d'exploitation du système d'information

1.4 Gestionnaire d'applications

2/1

COMPETENCES (issues du référentiel de compétence européen)

B3. Testing

Constructs and executes systematic test procedures for IT systems or customer usability requirements to establish compliance with design specifications. Ensures that new or revised components or systems perform to expectation. Ensures meeting of internal, external, national and international standards; including health and safety, usability, performance, reliability or compatibility. Produces documents and reports to evidence certification requirements.

Level 3

Exploits specialist knowledge to supervise complex testing programmes. Ensures tests and results are documented to provide input to subsequent process owners such as designers, users or maintainers. Accountable for compliance with testing procedures including a documented audit trail

B5. Documentation Production

Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements.

Selects appropriate style and media for presentation materials.

Creates templates for document-management systems.

Ensures that functions and features are documented in an appropriate way.

Ensures that existing documents are valid and up to date.

Level 3

Adapts the level of detail according to the objective of the documentation and the targeted population.

C1. User Support

Responds to user requests and issues; records relevant information. Resolves or escalates incidents and optimises system performance. Monitors solution outcome and resultant customer satisfaction.

Level 3

Manages the support process and is accountable for ensuring that agreed service levels are met. Plans resource allocation to ensure that the support is available with respect to the defined service level. Acts creatively, and seeks opportunities for continuous service improvement by analysing root causes. Manages the budget of the support function.

C2. Change Support

Implements and provides guidance for the evolution of an IT solution. Efficiently controls and schedules software or hardware modifications to prevent multiple upgrades creating unpredictable outcomes.

Minimises service disruption as a consequence of changes and adheres to defined service level agreement (SLA).

Level 3

Ensures the integrity of the system by controlling the application of functional updates, software or hardware additions and maintenance activities. Complies with budget requirements.

1.4 Gestionnaire d'applications

2/4

COMPETENCES (suite)

C3. Service Delivery

Takes proactive steps to ensure a stable and secure application and ICT infrastructure.

Updates operational document library and logs all operational events. Maintains monitoring and management tools (i.e. Scripts, Procedures...).

Level 2

Systematically analyses performance data and communicates findings to senior experts. Escalates potential service level failures and recommends actions to improve service reliability. Tracks reliability data against service level agreement.

C4. Problem Management

Identifies and resolves the root cause of incidents.

Takes a proactive approach to the root cause of ICT problems.

Deploys a knowledge system based on recurrence of common errors.

Level 4

Provides leadership and is accountable for the entire problem management process. Schedules and ensures well trained human resources, tools, and diagnostic equipment are available to meet emergency incidents. Has depth of expertise to anticipate critical component failure and make provision for recovery with minimum downtime. Constructs escalation processes to ensure that appropriate resources can be applied to each incident.

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

LIVRABLES

- Suivi des évolutions de ses systèmes applicatifs
- Indicateurs de performance de(s) l'application('s)
- Documentation applicative

INDICATEURS DE PERFORMANCE

- Nombre de demandes d'évolution ou de correction
- Degré de satisfaction du client
- Niveau de disponibilité et de performance des systèmes

1.4 Gestionnaire d'applications

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
de Bac +3 à Bac +5 en fonction du périmètre.	Fonctionnelle et opérationnelle du métier et du secteur d'activité. Expérience en SI et en gestion de projet.

Le positionnement du gestionnaire d'applications par rapport au responsable système d'information du métier n'est pas chose aisée.

L'articulation cohérente entre les deux rôles dépend fondamentalement

- des choix d'organisation : l'entreprise souhaite-t-elle mettre l'accent sur les projets innovants, la cohérence d'ensemble ou la maîtrise du fonctionnement ?
- et probablement aussi de la phase du cycle de vie du système d'information dans laquelle se situe l'entreprise : eston dans une phase de maturité et d'entretien du système d'information en place ou bien au contraire dans une phase de refonte importante ou même de conception d'un nouveau système d'information ?

TENDANCES ET FACTEURS D'EVOLUTION

Comme cela a déjà été souligné, dans un nombre croissant de projets, la qualité de la mise en service, qui marque la fin du projet et le début de l'exploitation de l'ouvrage, ainsi que l'utilisation intelligente et optimale des systèmes en place par les individus et surtout par les groupes, conditionnent la réussite globale du projet.

C'était beaucoup moins vrai avec les technologies antérieures, lorsque l'essentiel des efforts de l'entreprise portait sur la conception et le développement des systèmes, et que l'autonomie des utilisateurs était relativement faible (contexte de travail fortement prescrit).

A l'image de ce que l'on constate dans d'autres secteurs d'activité, la valeur ajoutée se déplace de plus en plus de l'amont (« production ») vers l'aval, à savoir le service client et l'usage.

1.5 Chargé d'affaires interne		European e-Competence C1GREF
Technico-commercial	Ingénieur d'affaires (garant de la qualité de service aux utilisateurs)	Ingénieur de (grands) comptes
Chargé de client interne	Customer Service Manager	Facilitateur

MISSION

Il est l'animateur de la relation contractuelle avec la DSI et représente le client (direction, maîtrise d'ouvrage, utilisateur) auprès des différents services de la DSI et des prestataires externes.

Il fédère et anime les relations entre les clients et la DSI. Il met en lumière les dysfonctionnements dans le cadre de ces relations et propose des améliorations aux acteurs du système d'information.

ACTIVITES ET TACHES

Information des métiers « clients »	A l'écoute des métiers, il les informe et conseille sur les services possibles, les formations possibles et prend en compte leurs besoins Participe à la sensibilisation des utilisateurs aux problèmes de sécurité (sauvegarde, virus)
Analyse et contrôle de la qualité de service	Effectue la mesure des indicateurs / qualité de service de la DSI afin de suivre la satisfaction des utilisateurs vis à vis du SI Analyse les écarts par rapport aux engagements de services (dont coûts et performances) et effectue des demandes d'actions de progrès visant à améliorer la qualité des services
Contractua- lisation de la relation métiers- DSI/client- fournisseur	Élabore et actualise les propositions de services, les devis (qualité, délai, coût), les conventions ou contrats de service (service fourni, facteurs qualité, organisation DSI, organisation et rôle client) Organise et prépare des points de fonctionnement mensuels Établit des bilans et comptes-rendus sur les activités et prestations fournies aux métiers sur les plans contractuels, économiques et techniques ainsi que sur les aspects d'image
Gestion du problème « client »	Prend en charge le problème "client" jusqu'à sa résolution Sollicite à bon escient les centres de compétences concernés

COMPETENCES (issues du référentiel de compétence européen)

AN	A2. Service Level Management	Level 3
A. PLA	Defines, validates and makes applicable service level agreements (SLA) and underpinning contracts for services offered. Negotiates service performance levels taking into account the needs and capacity of customers and business.	Influences and prepares the final Service Level Agreement (SLA) and accounts for the final content.
111	D5. Sales Proposal Development	Level 4
D. ENABLE	Develops technical proposals to meet customer solution requirements and provide sales personnel with a competitive bid. Underlines the energy efficiency and environmental impact related to a proposal. Collaborates with colleagues to align the service or product solution with the organizations capacity to deliver.	Interprets and influences customer needs and the reference business contexts, proposes consultancy projects, in order to provide the ideal customer solutions, i.e. behaves as a "consultative seller"

COMPETENCES (suite)

D7. Sales Management

Drives the achievement of sales results through the establishment of a sales

Demonstrates the added value of the organizations products and services to new or existing customers and prospects.

Establishes a sales support procedure providing efficient response to sales enquiries, consistent with company strategy and policy.

Establishes a systematic approach to the entire sales process, including understanding client needs, forecasting, prospect evaluation, negotiation tactics and sales closure.

Level 5

Assumes ultimate responsibility for the sales performance of the organization. Authorizes resource allocation, prioritizes product and service promotions, advises board directors of sales performance.

D8. Contract Management

Provides and negotiates contract in accordance with organizational processes. Ensures that supplier deliverables are provided on time, meet quality standards and comply with agreed service levels.

Addresses non-compliance escalates significant issues, drives recovery plans and if necessary amends contracts.

Maintains budget integrity. Assesses and addresses supplier compliance to legal, health and safety and security standards.

Actively pursues regular supplier communication.

Level 4

Provides Leadership for supplier contract compliance and is the final escalation point for issue resolution.

D10. Information and Knowledge Management

Identifies and manages structured and unstructured information and considers information distribution policies. Creates information structure to enable exploitation and optimization of information for business benefit. Understands appropriate tools to be deployed to create, extract, maintain, renew and propagate business knowledge in order to capitalize from the information asset.

Level 3

Analyses Business processes and associated information requirements and provides the most appropriate information structure.

E4. Relationship Management

Establishes and maintains positive business relationships between the client and provider (internal or external) deploying and complying with organizational

Maintains regular communication with client/partner/supplier, and addresses needs through empathy with their environment and managing supply chain communications.

Ensures that client/partner/supplier needs, concerns or complaints are understood and addressed in accordance with organizational policy.

Level 4

Provides leadership for large or many client relationships. Authorises investment in new and existing relationships. Leads the design of a workable procedure for maintaining positive business relationships.

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

LIVRABLES

- Nouveaux projets ou chantiers d'amélioration
- SLA (Service Level Agreement) sur l'établissement du contrat de service avec le métier (le client) et en rend compte (voir dénomination ITIL)

INDICATEURS DE PERFORMANCE

- Mesure de la réactivité par rapport à la demande du client
- « Chiffre d'affaire »

1.5 Chargé d'affaires interne

3/3

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
Bac + 5 Généraliste.	Au moins 10 ans d'expérience dans le domaine informatique. Expérience importante dans l'entreprise et bonne connaissance des domaines fonctionnels Expérience réussie de gestion de projets informatiques.
Évolution de carrière intéressante pour les informaticiens souhaitant sortir de la technique pure.	

TENDANCES ET FACTEURS D'EVOLUTION

Fonction en forte croissance en raisons de :

- la complexité technique croissante et la diversification de l'offre informatique ;
- la volonté des clients de maîtriser les coûts, les délais et la qualité des projets informatiques.

2. MANAGEMENT DE PROJETS

Cette famille regroupe tous les métiers qui **pilotent**, suivent et **coordonnent** les projets de développement, déploiement, infrastructure ou méthode Informatique, risques etc.

Ces métiers organisent les activités, la gestion des ressources et la communication.

Cette famille comprend les métiers suivants :

- 2.1 Directeur de projets
- 2.2 Chef de projet maitrise d'ouvrage
- 2.3 Chef de projet maitrise d'œuvre

1 //

Responsable de projet

Directeur de programme

MISSION

Le Directeur de projet assume la responsabilité fondamentale du ou des projets dans toutes ses dimensions (stratégiques, commerciales, financières, humaines, juridiques, organisationnelles, techniques...).

Il pilote l'ensemble du ou des projets dans toute sa complexité (multiplicité des parties prenantes, intérêts souvent divergents...).

Il est le garant de l'enjeu stratégique du projet pour le métier, l'entreprise ou des tiers.

ACTIVITES ET TACHES

Direction du projet	Garantit la pertinence et l'opportunité du développement du ou des projets Est responsable de toutes les décisions importantes Valide la recette définitive du ou des projets
Communication / Animation	Mène toute action pour mener le ou les projets à bonne fin Gère et anime la communication auprès des équipes et des différentes instances Prépare et pilote la conduite du changement
Gestion des ressources	Conduit, optimise et est responsable de l'ensemble des ressources du ou des projets (humains, budget, clientèle, décision finale) Est responsable de la gestion financière du ou des projets ainsi que de toutes les exigences définies (qualité, coût, délai)

COMPETENCES (issues du référentiel de compétence européen)

	A4. Product or Project Planning	Level 4
PLAN	Analyses and defines current and target status. Estimates cost effectiveness, points of risk, opportunities, strengths and weaknesses, with a critical approach. Creates structure plans; establishes time scales and milestones. Manages change requests. Defines delivery quantity and provides an overview of additional documentation requirements. Specifies correct handling of products.	Acts with wide ranging accountability to take responsibility for complete project or product plan.
A.	A8. Sustainable Development	Level 3
	Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption. Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy. Applies an ICT purchasing and sales policy which fulfils eco-responsibilities.	Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.

2/4

COMPETENCES (suite)

D2. ICT Quality Strategy Development

Defines, improves and refines a formal strategy to satisfy customer expectations and improve business performance (balance between cost and risks). Identifies critical processes influencing service delivery and product performance for definition in the ICT quality management system (ref D.4).

Uses defined standards to formulate objectives for service management, product and process quality.

Identifies ICT quality management accountability.

Level 4

Exploits wide ranging specialist knowledge to leverage and authorize the application of external standards and best practices.

D4. Purchasing

Applies a consistent procurement procedure, including deployment of the following sub processes: specification requirements, supplier identification, proposal analysis, evaluation of the energy efficiency and environmental compliance of products, suppliers and their processes, contract negotiation, supplier selection and contract placement. Ensures that the entire purchasing process is fit for purpose and adds business value to the organisation.

Level 4

Provides leadership for the application of the organisations procurement policies and makes recommendations for process enhancement. Applies experience and procurement practice expertise to make ultimate purchasing decisions.

D8. Contract Management

Provides and negotiates contract in accordance with organisational processes. Ensures that supplier deliverables are provided on time, meet quality standards and comply with agreed service levels. Addresses non-compliance escalates significant issues, drives recovery plans and if necessary amends contracts. Maintains budget integrity. Assesses and addresses supplier compliance to legal, health and safety and security standards. Actively pursues regular supplier communication.

Level 2

Acts systematically to monitor contract compliance and promptly escalate defaults.

D9. Personnel Development

Diagnoses individual and group competence, identifying skill needs and skill gaps. Reviews training and development options and selects appropriate methodology taking into account the needs of the individual and the business. Coaches and/ or mentors individuals and teams to address learning needs.

Level 4

Takes proactive action and develops organizational processes to address the development needs of individuals, teams and the entire workforce.

D10. Information and Knowledge Management

Identifies and manages structured and unstructured information and considers information distribution policies.

Creates information structure to enable exploitation and optimization of information for business benefit.

Understands appropriate tools to be deployed to create, extract, maintain, renew and propagate business knowledge in order to capitalize from the information asset.

Level 3

Analyses Business processes and associated information requirements and provides the most appropriate information structure.

2/4

COMPETENCES (suite)

E2. Project and Portfolio Management

Implements plans for a programme of change.

Plans and directs a single or portfolio of ICT projects to ensure co-ordination and management of interdependencies.

Orchestrates projects to develop or implement new, internal or externally defined processes to meet identified business needs.

Defines activities, responsibilities, critical milestones, resources, skills needs, interfaces and budget.

Develops contingency plans to address potential implementation issues.

Delivers project on time, on budget and in accordance with original requirements. Creates and maintains documents to facilitate monitoring of project progress.

E3. Risk Management

Implements the management of risk across information systems through the application of the enterprise defined risk management policy and procedure. Assesses risk to the organisations business, and documents potential risk and containment plans.

E4. Relationship Management

Establishes and maintains positive business relationships between the client and provider (internal or external) deploying and complying with organisational processes.

Maintains regular communication with client/partner/supplier, and addresses needs through empathy with their environment and managing supply chain communications.

Ensures that client/partner/supplier needs, concerns or complaints are understood and addressed in accordance with organisational policy.

E6.ICT Quality Management

Implements ICT quality policy to maintain and enhance service and product provision.

Plans and defines indicators to manage quality with respect to ICT strategy. Reviews quality performance indicators and recommends enhancements to influence continuous quality improvement.

E7.Business Change Management

Assesses the implications of new IT solutions.

Defines the requirements and quantifies the business benefits.

Manages the deployment of change taking into account structural and cultural issues.

Maintains business and process continuity throughout change, monitoring the impact, taking any required remedial action and refining approach

Level 5

Provides strategic leadership for extensive interrelated programmes of work to ensure that Information Technology is a change enabling agent and delivers benefit in line with overall business strategic aims. Applies extensive business and technological mastery to conceive and bring innovative ideas to fruition.

Level 3

Decides on appropriate actions required to adapt security and address risk exposure. Evaluates, manages and ensures validation of exceptions; audits ICT processes and environment

Level 4

Provides leadership for large or many client relationships.
Authorizes investment in new and existing relationships. Leads the design of a workable procedure for maintaining positive business relationships.

Level 2

Assesses and estimates the degree to which quality requirements have been met and provides leadership for quality policy implementation. Provides cross functional leadership for setting and exceeding quality standards

Level 4

Provides leadership to plan, manage and implement significant IT led business change

1/1

COMPETENCES (suite)

MANAGE

E8. Information Security Management

Implements information security policy. Monitors and takes action against intrusion, fraud and security breaches or leaks.

Ensures that security risks are analysed and managed with respect to enterprise data and information.

Reviews security incidents and makes recommendations for continuous security enhancement.

Level 4

Provides leadership for the integrity, confidentiality and availability of data stored on information systems and complies with all legal requirements

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

- Plan de l'organisation du ou des projets qu'il manage
- Reporting Direction sur l'alignement des projets

INDICATEURS DE PERFORMANCE

• Indicateurs qualité/coûts/délais

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
Bac + 5	
Formation initiale supérieure	Plus de 7 ans en tant que manager et en conduite de projet opérationnel.
(gestionnaire ou ingénieur).	

Il a la responsabilité de conduire l'ensemble des opérations nécessaires à l'étude, au développement et à la réalisation d'un projet majeur. Il assume donc la responsabilité pleine et entière de la « direction du projet » pour atteindre l'objectif (stratégique, commercial, financier, organisationnel ou autre) posé par le métier, plus que la « gestion du projet » proprement dite, qui est de la responsabilité du chef de projet.

Il est aussi le garant de l'identité du projet (contrairement aux autres intervenants qui ne se préoccupent que d'un aspect particulier) et pilote sa convergence progressive vers le résultat.

Parce qu'au-delà du développement d'un système d'information pour le métier, le directeur de projet peut avoir en charge les aspects marketing, commerciaux, économiques, organisationnels, juridiques et humains du projet et de son exploitation, il s'apparente à un « intrapreneur ».

TENDANCES ET FACTEURS D'EVOLUTION

Deux tendances d'évolution sont à signaler :

- d'une part, les projets « système d'information » sont aujourd'hui de plus en plus importants en termes d'enjeux, d'investissements, d'organisations concernées, de complexité et de périmètre géographique ;
- d'autre part, et pour la même raison, ce sont de moins en moins des projets « informatiques » stricto sensu, mais des projets d'entreprise qui touchent à la refonte des processus internes, au développement de nouveaux produits, à la réorganisation des réseaux de gestion, à la connaissance et la fidélisation des clients ou à la refonte des chaînes logistiques.

Cette fonction peut être le couronnement d'une carrière ou la voie vers les fonctions supérieures de l'entreprise. En effet, la direction de projet est de plus en plus regardée par les entreprises comme une compétence managériale de haut niveau et cette compétence rare et recherchée peut donc s'intégrer dans un parcours qui a été sciemment construit.

1/5

Chef de projet métier	Chef de projet utilisateur (CPU)	Conducteur de projet
Pilote stratégique		

MISSION

Définit, met en œuvre et conduit un projet dans le but d'obtenir un résultat optimal et conforme aux exigences métiers formulées et validées par ou pour le commanditaire en ce qui concerne la qualité, les performances, le coût, le délai et la sécurité.

ACTIVITES ET TACHES

Responsabilité du contenu fonctionnel du projet	Définit les besoins métier, établit les spécifications fonctionnelles générales et rédige précisément le cahier des charges Participe au choix d'une solution (progiciel, développement,) en relation avec le maître d'œuvre Prévoit les moyens à mettre en œuvre (humains, techniques, financiers) Définit et supervise la réalisation des prototypes et des tests fonctionnels.
Conduite du projet	Organise, coordonne et anime l'équipe de maîtrise d'ouvrage du projet Arbitre les éventuels différends entre l'équipe et les autres intervenants Supervise le déroulement du projet Coordonne, synthétise, et assure la qualité des validations prononcées Fait circuler et diffuse l'information côté métiers Est responsable de la totalité des événements survenant dans le projet
Préparation, déploiement du projet, et mise en œuvre des actions d'accompa- gnement des utilisateurs	Définit la cible utilisateurs Définit au plus tôt la méthode et les moyens pédagogiques de formation des utilisateurs Met en œuvre la formation et l'accompagnement des utilisateurs, en fonction de leurs besoins Définit le service de support à l'utilisateur Définit les modalités de traitement des demandes d'évolution
Garantie de la meilleure adéquation qualité - coût - délai	Effectue la recette des réalisations et apprécie leur conformité au cahier des charges de l'ouvrage Garantit le respect des délais et des coûts Propose au commanditaire, en cours de projet, d'éventuelles modifications d'objectifs (qualité, coût, délai) liées à des contraintes de réalisation ou des modifications d'environnement Définit et gère le planning d'avancement du projet Arbitre les choix à faire en fonction du risque et du résultat Met en place tous les indicateurs nécessaires au suivi et à la gestion du projet, notamment sur l'évaluation de la performance, des coûts et des délais

COMPETENCES (issues du référentiel de compétence européen)

7	
5	
Q	
_	
Д	

A2. Service Level Management

Defines, validates and makes applicable service level agreements (SLA) and underpinning contracts for services offered.

Negotiates service performance levels taking into account the needs and capacity of customers and business.

Level 3

Influences and prepares the final Service Level Agreement (SLA) and accounts for the final content.

2/5

COMPETENCES (suite)

A4. Product or Project Planning

Analyses and defines current and target status.

Estimates cost effectiveness, points of risk, opportunities, strengths and weaknesses, with a critical approach.

Creates structure plans; establishes time scales and milestones.

Manages change requests.

Defines delivery quantity and provides an overview of additional documentation requirements.

Specifies correct handling of products.

Level 4

Acts with wide ranging accountability to take responsibility for complete project or product plan.

A6. Application Design

Defines the most suitable ICT solutions in accordance with ICT policy and user/customer needs.

Accurately estimates development, installation and maintenance of application costs

Selects appropriate technical options for solution design, optimising the balance between cost and quality.

Identifies a common reference framework to validate the models with representative users.

Level 1

Contributes to the design and general functional specification and interfaces.

A8. Sustainable Development

Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption.

Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy.

Applies an ICT purchasing and sales policy which fulfils eco-responsibilities.

Level 3

Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.

B3. Testing

j

Constructs and executes systematic test procedures for IT systems or customer usability requirements to establish compliance with design specifications. Ensures that new or revised components or systems perform to expectation. Ensures meeting of internal, external, national and international standards; including health and safety, usability, performance, reliability or compatibility. Produces documents and reports to evidence certification requirements.

Level 2

Organises test programmes and builds scripts to stress test potential vulnerabilities. Records and reports outcomes providing analysis of results.

B4. Solution Deployment

Following predefined general standards of practice carries out planned necessary interventions to implement solution, including installing, upgrading or decommissioning.

Configures hardware, software or network to ensure interoperability of system components and debugs any resultant faults or incompatibilities.

Engages additional specialist resources if required, such as third party network providers.

Formally hands over fully operational solution to user and completes documentation recording all relevant information, including equipment addressees, configuration and performance data.

Level 3

Accounts for own and others actions within solution provision activities including comprehensive communications with client. Exploits specialist knowledge to influence solution construction. Gives advice on aligning work processes and procedures with software upgrades.

3/5

COMPETENCES (suite)

BUILD:

B5. Documentation Production

Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements.

Selects appropriate style and media for presentation materials.

Creates templates for document-management systems.

Ensures that functions and features are documented in an appropriate way. Ensures that existing documents are valid and up to date.

Level 2

Determines documentation requirements taking into account the purpose and environment to which it applies.

C2. Change Support

Implements and provides guidance for the evolution of an IT solution. Efficiently controls and schedules software or hardware modifications to prevent multiple upgrades creating unpredictable outcomes.

Minimizes service disruption as a consequence of changes and adheres to defined service level agreement (SLA).

Level 2

During change, acts systematically to respond to day by day operational needs and react to them, avoiding service disruptions and maintaining coherence to service level agreement (SLA).

D2. ICT Quality Strategy Development

Defines, improves and refines a formal strategy to satisfy customer expectations and improve business performance (balance between cost and risks). Identifies critical processes influencing service delivery and product performance for definition in the ICT quality management system (ref D.4).

Uses defined standards to formulate objectives for service management, product and process quality.

Identifies ICT quality management accountability.

Level 4

Exploits wide ranging specialist knowledge to leverage and authorise the application of external standards and best practices.

D9. Personnel Development

Diagnoses individual and group competence, identifying skill needs and skill gaps. Reviews training and development options and selects appropriate methodology taking into account the needs of the individual and the business.

Coaches and/ or mentors individuals and teams to address learning needs.

Level 3

Monitors and addressees the development needs of individuals and teams.

D10. Information and Knowledge Management

Identifies and manages structured and unstructured information and considers information distribution policies.

Creates information structure to enable exploitation and optimisation of information for business benefit.

Understands appropriate tools to be deployed to create, extract, maintain, renew and propagate business knowledge in order to capitalise from the information asset.

Level 3

Analyses Business processes and associated information requirements and provides the most appropriate information structure

4/5

COMPETENCES (suite)

E2. Project and Portfolio Management

Implements plans for a programme of change.

Plans and directs a single or portfolio of ICT projects to ensure co-ordination and management of interdependencies.

Orchestrates projects to develop or implement new, internal or externally defined processes to meet identified business needs.

Defines activities, responsibilities, critical milestones, resources, skills needs, interfaces and budget.

Develops contingency plans to address potential implementation issues.

Delivers project on time, on budget and in accordance with original requirements. Creates and maintains documents to facilitate monitoring of project progress.

Level 4

Exploits wide ranging skills in project management to work beyond project boundary.

Manages complex projects or programmes, including interaction with others. Influences project strategy by proposing new or alternative solutions. Takes overall responsibility for project outcomes, including finance and resource management. Is empowered to revise rules and choose standards.

E3. Risk Management

Implements the management of risk across information systems through the application of the enterprise defined risk management policy and procedure. Assesses risk to the organisations business, and documents potential risk and containment plans.

Level 2

Understands and applies the principles of risk management and investigates ICT solutions to mitigate identified risks

E4. Relationship Management

Establishes and maintains positive business relationships between the client and provider (internal or external) deploying and complying with organizational processes.

Maintains regular communication with client/partner/supplier, and addresses needs through empathy with their environment and managing supply chain communications.

Ensures that client/partner/supplier needs, concerns or complaints are understood and addressed in accordance with organizational policy.

Level 3

Accounts for own and others actions in managing a limited client base.

E6. ICT Quality Management

Implements ICT quality policy to maintain and enhance service and product provision.

Plans and defines indicators to manage quality with respect to ICT strategy. Reviews quality performance indicators and recommends enhancements to influence continuous quality improvement.

Level 2

Communicates and monitors application of the organizations quality policy

E7. Business Change Management

Assesses the implications of new IT solutions. Defines the requirements and quantifies the business benefits.

Manages the deployment of change taking into account structural and cultural issues.

Maintains business and process continuity throughout change, monitoring the impact, taking any required remedial action and refining approach

Level 3

Evaluates change requirements and exploits specialist skills to identify possible methods and standards that can be deployed

5/5

COMPETENCES (suite)

MANAGE

E8. Information Security Management

Implements information security policy.

Monitors and takes action against intrusion, fraud and security breaches or leaks. Ensures that security risks are analysed and managed with respect to enterprise data and information.

Reviews security incidents and makes recommendations for continuous security enhancement.

Level 2

Systematically scans the environment to identify and define vulnerabilities and threats.
Records and escalates noncompliance

INDICATEURS DE PERFORMANCE

• Différentiel notifié dans les procès-verbaux de recettes en ce qui concerne la qualité, les performances, le coût et le délai.

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
Bac + 5	Minimum 3 à 5 ans, étant entendu que la maîtrise d'ouvrage sur des grands projets nécessitera une expérience préalable sur des projets de moindre ampleur.

Le chef de projet maîtrise d'ouvrage est un homme de métier, représentant des utilisateurs du système d'information, qui exerce une activité de responsabilité au cœur d'un métier de l'entreprise.

Généralement, ce n'est pas un spécialiste du traitement de l'information.

Lorsque le projet est important et nécessite la mise en place d'une véritable direction de projet, le chef de projet rapporte au responsable métier de projet.

Le chef de projet utilisateur doit travailler dès le lancement du projet en étroite coopération avec son homologue de la maîtrise d'œuvre, le chef de projet informatique. Le travail en binôme est une condition sine qua non de succès.

Confiée à un manager expérimenté, cette fonction peut conduire à des postes plus importants tels que celui de directeur de projet ou à des postes opérationnels de la direction métiers pour laquelle il a réalisé le projet

TENDANCES ET FACTEURS D'EVOLUTION

La diffusion du mode projet dans les entreprises conduit celles-ci à chercher à cerner beaucoup plus minutieusement les relations maîtrise d'ouvrage - maîtrise d'œuvre, ainsi qu'à préciser le fonctionnement matriciel qui permet au projet de s'appuyer sur différentes ressources internes.

1/7

Pilote opérationnel

Chef de projet informatique

Project Manager

MISSION

Définit, met en œuvre et conduit un projet SI depuis sa conception jusqu'à la réception dans le but d'obtenir un résultat optimal et conforme aux exigences formulées par le chef de projet MOA ou le client métier en ce qui concerne la qualité, les performances, le coût, le délai et la sécurité.

ACTIVITES ET TACHES

Responsabilité du contenu technique du projet	Définit la conception technique et rédige les spécifications techniques détaillées Participe au choix de progiciels, en relation avec le maître d'ouvrage Participe à la réalisation en termes de développements spécifiques ou d'intégration Définit les tests et participe aux recettes
Conduite du projet sur le terrain	Organise, coordonne et anime l'ensemble de l'équipe de maîtrise d'œuvre du projet Arbitre les éventuels différends entre l'équipe et les autres intervenants Supervise le déroulement du projet Coordonne, synthétise, et assure la qualité des validations prononcées Fait circuler et diffuse l'information côté maîtrise d'œuvre Gère la relation avec le ou les fournisseurs (depuis la signature du contrat à la validation finale du projet)
Déploiement technique du projet et mise en œuvre des actions d'accompagnement des utilisateurs	Déploie la nouvelle application ou le nouveau service Organise la maintenance Participe à la formation des utilisateurs Organise du support utilisateur
Garantie de la meilleure adéquation qualité - coût - délai	Garantit le respect du cahier des charges Garantit le respect des délais et des coûts Propose au métier ou maître d'ouvrage, en cours de projet, d'éventuelles modifications d'objectifs (qualité, coût, délai) liées à des contraintes de réalisation ou des modifications d'environnement

COMPETENCES (issues du référentiel de compétence européen)

A2. Service Level Management Defines, validates and makes applicab

Defines, validates and makes applicable service level agreements (SLA) and underpinning contracts for services offered.

Negotiates service performance levels taking into account the needs and capacity of customers and business.

Level 3

Influences and prepares the final Service Level Agreement (SLA) and accounts for the final content.

2/7

COMPETENCES (suite)

A4. Product or Project Planning

Analyses and defines current and target status.

Estimates cost effectiveness, points of risk, opportunities, strengths and weaknesses, with a critical approach.

Creates structure plans; establishes time scales and milestones.

Manages change requests.

Defines delivery quantity and provides an overview of additional documentation requirements.

Specifies correct handling of products.

Level 3

Level 4

responsibility for complete project

Acts with wide ranging

accountability to take

or product plan.

Exploits specialist knowledge to define relevant ICT technology and specifications to be deployed in the construction of multiple ICT projects, applications or infrastructure improvements.

A5. Architecture Design

Specifies, refines, updates and makes available a formal approach to implement solutions, necessary to develop and operate the IS architecture. Manages the relationship with the business stakeholders to ensure that the architecture is in line with business requirements. Identifies the need for change and the components involved; hardware, software, applications, processes, information and technology platform. Ensures that all aspects take account of interoperability, scalability usability and security.

A6. Application Design

Defines the most suitable ICT solutions in accordance with ICT policy and user/customer needs.

Accurately estimates development, installation and maintenance of application costs.

Selects appropriate technical options for solution design, optimising the balance between cost and quality.

Identifies a common reference framework to validate the models with representative users.

Level 3

Accounts for own and others actions in ensuring that the application is correctly integrated within a complex environment and complies with user/customer needs

A8. Sustainable Development

Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption.

Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy.

Applies an ICT purchasing and sales policy which fulfils eco-responsibilities.

Level 3

Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.

B1. Design and Development

Designs and engineers software and/ or hardware components to meet required specifications, including energy efficiency issues.

Follows a systematic methodology to analyse and build the required components and interfaces.

 $Performs\ unit\ and\ system\ testing\ to\ ensure\ requirements\ are\ met.$

Level 3

Acts creatively to develop and integrate components into a larger product.

2/7

COMPETENCES (suite)

B2. Systems Integration

Installs additional hardware, software or sub system components into an existing or proposed system.

Complies with established processes and procedures (e.g. configuration management), taking into account the specification, capacity and compatibility of existing and new modules to ensure integrity and interoperability.

Verifies system performance and ensures formal sign off and documentation of successful integration.

Level 3

Accounts for own and others actions in the integration process. Complies with appropriate standards and change control procedures to maintain integrity of the overall system functionality and reliability.

And Level 4

Exploits wide ranging specialist knowledge to create a process for the entire integration cycle, including the establishment of internal standards of practice. Provides leadership to marshal and assign resources for programmes of integration.

B3. Testing

Constructs and executes systematic test procedures for IT systems or customer usability requirements to establish compliance with design specifications. Ensures that new or revised components or systems perform to expectation. Ensures meeting of internal, external, national and international standards; including health and safety, usability, performance, reliability or compatibility. Produces documents and reports to evidence certification requirements.

Level 2

Organises test programmes and builds scripts to stress test potential vulnerabilities. Records and reports outcomes providing analysis of results.

B4. Solution Deployment

Following predefined general standards of practice carries out planned necessary interventions to implement solution, including installing, upgrading or decommissioning.

Configures hardware, software or network to ensure interoperability of system components and debugs any resultant faults or incompatibilities.

Engages additional specialist resources if required, such as third party network providers.

Formally hands over fully operational solution to user and completes documentation recording all relevant information, including equipment addressees, configuration and performance data.

Level 3

Accounts for own and others actions within solution provision activities including comprehensive communications with client. Exploits specialist knowledge to influence solution construction. Gives advice on aligning work processes and procedures with software upgrades.

B5. Documentation Production

Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements.

Selects appropriate style and media for presentation materials.

Creates templates for document-management systems.

Ensures that functions and features are documented in an appropriate way. Ensures that existing documents are valid and up to date.

Level 2

Determines documentation requirements taking into account the purpose and environment to which it applies.

4/7

COMPETENCES (suite)

C2. Change Support

Implements and provides guidance for the evolution of an IT solution. Efficiently controls and schedules software or hardware modifications to prevent multiple upgrades creating unpredictable outcomes.

Minimizes service disruption as a consequence of changes and adheres to defined service level agreement (SLA).

Level 3

Ensures the integrity of the system by controlling the application of functional updates, software or hardware additions and maintenance activities. Complies with budget requirements.

D2. ICT Quality Strategy Development

Defines, improves and refines a formal strategy to satisfy customer expectations and improve business performance (balance between cost and risks). Identifies critical processes influencing service delivery and product performance for definition in the ICT quality management system (ref D.4).

Uses defined standards to formulate objectives for service management, product and process quality.

Identifies ICT quality management accountability.

Level 4

Exploits wide ranging specialist knowledge to leverage and authorise the application of external standards and best practices.

D4. Purchasing

Applies a consistent procurement procedure, including deployment of the following sub processes: specification requirements, supplier identification, proposal analysis, evaluation of the energy efficiency and environmental compliance of products, suppliers and their processes, contract negotiation, supplier selection and contract placement.

Ensures that the entire purchasing process is fit for purpose and adds business value to the organisation.

Level 2

Understands and applies the principles of the procurement process; places orders based on existing supplier contracts. Ensures the correct execution of orders, including validation of deliverables and correlation with subsequent payments.

Level 3

Exploits specialist knowledge to deploy the purchasing process, ensuring positive commercial relationships with suppliers.
Selects suppliers, products and services by evaluating performance, cost, timeliness and quality. Decides contract placement and complies with organisational policies.

5/7

COMPETENCES (suite)

D8. Contract Management

Provides and negotiates contract in accordance with organisational processes. Ensures that supplier deliverables are provided on time, meet quality standards and comply with agreed service levels.

Addresses non-compliance escalates significant issues, drives recovery plans and if necessary amends contracts.

Maintains budget integrity. Assesses and addresses supplier compliance to legal, health and safety and security standards.

Actively pursues regular supplier communication.

Level 2

Acts systematically to monitor contract compliance and promptly escalate defaults.

D9. Personnel Development

Diagnoses individual and group competence, identifying skill needs and skill gaps. Reviews training and development options and selects appropriate methodology taking into account the needs of the individual and the business. Coaches and/ or mentors individuals and teams to address learning needs.

D10. Information and Knowledge Management

Identifies and manages structured and unstructured information and considers information distribution policies.

Creates information structure to enable exploitation and optimisation of information for business benefit.

Understands appropriate tools to be deployed to create, extract, maintain, renew and propagate business knowledge in order to capitalise from the information asset

Level 3

Monitors and addressees the development needs of individuals and teams.

Level 3

Analyses Business processes and associated information requirements and provides the most appropriate information structure

E2. Project and Portfolio Management

Implements plans for a programme of change.

Plans and directs a single or portfolio of ICT projects to ensure co-ordination and management of interdependencies.

Orchestrates projects to develop or implement new, internal or externally defined processes to meet identified business needs.

Defines activities, responsibilities, critical milestones, resources, skills needs, interfaces and budget.

Develops contingency plans to address potential implementation issues.

Delivers project on time, on budget and in accordance with original requirements.

Creates and maintains documents to facilitate monitoring of project progress.

Level 4

Exploits wide ranging skills in project management to work beyond project boundary.

Manages complex projects or programmes, including interaction with others. Influences project strategy by proposing new or alternative solutions. Takes overall responsibility for project outcomes, including finance and resource management. Is empowered to revise rules and choose standards.

E3. Risk Management

Implements the management of risk across information systems through the application of the enterprise defined risk management policy and procedure. Assesses risk to the organisations business, and documents potential risk and containment plans.

Level 2

Understands and applies the principles of risk management and investigates ICT solutions to mitigate identified risks

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

49

6/7

COMPETENCES (suite)

E4. Relationship Management

Establishes and maintains positive business relationships between the client and provider (internal or external) deploying and complying with organizational processes.

Maintains regular communication with client/partner/supplier, and addresses needs through empathy with their environment and managing supply chain communications.

Ensures that client/partner/supplier needs, concerns or complaints are understood and addressed in accordance with organizational policy.

E6. ICT Quality Management

Implements ICT quality policy to maintain and enhance service and product provision.

Plans and defines indicators to manage quality with respect to ICT strategy. Reviews quality performance indicators and recommends enhancements to influence continuous quality improvement.

E7. Business Change Management

Assesses the implications of new IT solutions. Defines the requirements and quantifies the business benefits.

Manages the deployment of change taking into account structural and cultural issues.

Maintains business and process continuity throughout change, monitoring the impact, taking any required remedial action and refining approach

E8. Information Security Management

Implements information security policy.

Monitors and takes action against intrusion, fraud and security breaches or leaks. Ensures that security risks are analysed and managed with respect to enterprise data and information.

Reviews security incidents and makes recommendations for continuous security enhancement.

Level 3

Accounts for own and others actions in managing a limited client base.

Level 2

Communicates and monitors application of the organizations quality policy

Level 3

Evaluates change requirements and exploits specialist skills to identify possible methods and standards that can be deployed

Level 2

Systematically scans the environment to identify and define vulnerabilities and threats.
Records and escalates noncompliance

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
Bac + 5	3 à 5 ans, étant entendu que la maîtrise d'œuvre sur des grands projets nécessitera une expérience préalable sur des projets de moindre ampleur.

Le chef de projet maîtrise d'œuvre est en général issu, pour un projet à dominante système d'information, de la direction des systèmes d'information.

Lorsque le projet est important et nécessite la mise en place d'une véritable direction de projet, le chef de projet rapporte au responsable métier de projet

TENDANCES ET FACTEURS D'EVOLUTION

C'est un spécialiste du traitement de l'information, mais ses compétences débordent très largement ce domaine et il doit pouvoir dialoguer efficacement avec la maîtrise d'ouvrage sur les préoccupations métier de celle-ci.

La diffusion du mode projet dans les entreprises conduit celles-ci à essayer de cerner beaucoup plus minutieusement les relations maîtrise d'ouvrage - maîtrise d'œuvre, ainsi qu'à préciser le fonctionnement matriciel qui permet au projet de s'appuyer sur différentes ressources internes.

3. CYCLE DE VIE DES APPLICATIONS

Cette famille regroupe les métiers liés à la conception, au développement et à la réalisation technique et applicative des projets.

Ces métiers n'interviennent pas sur l'organisation des SI mais sur les briques mises en œuvre pour **intégrer**, **concevoir** et **maintenir** les solutions IT.

Cette famille comprend les métiers suivants :

- 3.1 Responsable des systèmes applicatifs
- 3.2 Concepteur Développeur
- 3.3 Testeur
- 3.4 Intégrateur d'applications
- 3.5 Paramétreur de progiciels

3.1 Responsable des systèmes applicatifs		European e-Competence C1GREF
Gestionnaire d'application	Correspondant informatique d'application	Responsable informatique de système
Responsable de groupe d'application	Responsable du maintien en condition opérationnel des applications	Responsable de domaine applicatif

MISSION

Il assure et coordonne les activités de maintenance corrective et applicative du système dont il est responsable. Il en assure aussi le support de niveau 2 et le conseil dans le respect du contrat de services et du Plan Qualité. Il est aussi le garant du maintien des connaissances fonctionnelles et techniques nécessaires à la pérennité de l'application.

ACTIVITES ET TACHES

Gestion de la configuration logicielle	Assiste et conseille sur l'utilisation du système applicatif dont il a la charge, Vérifie et assure la qualité et la performance du fonctionnement des applications dont il est responsable. Coordonne la maintenance corrective, préventive et évolutive,
Gestion de la qualité de la configuration	Applique les normes, méthodes et outils, S'assure de la cartographie applicative utilisée dans le cadre du référentiel d'urbanisation, Identifie et met à jour le référentiel documentaire du système applicatif dont il est responsable. Assure la pérennité des connaissances sur les solutions apportées dans le cadre de la maintenance (KM)
Communication	Est l'interlocuteur privilégié de la DSI avec les utilisateurs pour son application, Est l'interlocuteur privilégié avec la production informatique pour l'application dont il responsable

COMPETENCES (issues du référentiel de compétence européen)

	A8. Sustainable Development	Level 3
A. PLAN	Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption. Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy. Applies an ICT purchasing and sales policy which fulfils eco-responsibilities	Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.
	B2. Systems Integration	Level 3
B. BUILD	Installs additional hardware, software or sub system components into an existing or proposed system. Complies with established processes and procedures (e.g. configuration management), taking into account the specification, capacity and compatibility of existing and new modules to ensure integrity and interoperability. Verifies system performance and ensures formal sign off and documentation of successful integration.	Accounts for own and others actions in the integration process. Complies with appropriate standards and change control procedures to maintain integrity of the overall system functionality and reliability.

3.1 Responsable des systèmes applicatifs

2/4

COMPETENCES (suite)

B3. Testing

Constructs and executes systematic test procedures for IT systems or customer usability requirements to establish compliance with design specifications. Ensures that new or revised components or systems perform to expectation. Ensures meeting of internal, external, national and international standards; including health and safety, usability, performance, reliability or compatibility. Produces documents and reports to evidence

Level 2

Organises test programmes and builds scripts to stress test potential vulnerabilities. Records and reports outcomes providing analysis of results.

B4. Solution Deployment

Following predefined general standards of practice carries out planned necessary interventions to implement solution, including installing, upgrading or decommissioning.

Configures hardware, software or network to ensure interoperability of system components and debugs any resultant faults or incompatibilities.

Engages additional specialist resources if required, such as third party network providers.

Formally hands over fully operational solution to user and completes documentation recording all relevant information, including equipment addressees, configuration and performance data.

Level 3

Accounts for own and others actions within solution provision activities including comprehensive communications with client.
Exploits specialist knowledge to influence solution construction.
Gives advice on aligning work processes and procedures with software upgrades.

B5. Documentation Production

Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements.

Selects appropriate style and media for presentation materials. Creates templates for document-management systems.

Ensures that functions and features are documented in an appropriate way. Ensures that existing documents are valid and up to date.

Level 3

Adapts the level of detail according to the objective of the documentation and the targeted population.

C1. User Support

Responds to user requests and issues; records relevant information.

Resolves or escalates incidents and optimises system performance. Monitors solution outcome and resultant customer satisfaction.

Level 2

Systematically interprets user problems identifying the solutions and possible side effects. Uses experience to identifying user problems and interrogates database for potential solutions. Escalates complex or unresolved incidents to senior experts. Records and tracks user support procedures from outset to conclusion.

3.1 Responsable des systèmes applicatifs

3/4

COMPETENCES (suite)

C2. Change Support

Implements and provides guidance for the evolution of an IT solution.

Efficiently controls and schedules software or hardware modifications to prevent multiple upgrades creating unpredictable outcomes.

Minimises service disruption as a consequence of changes and adheres to defined service level agreement (SLA).

Level 2

During change, acts systematically to respond to day by day operational needs and react to them, avoiding service disruptions and maintaining coherence to service level agreement (SLA).

C3. Service Delivery

Takes proactive steps to ensure a stable and secure application and ICT infrastructure.

Updates operational document library and logs all operational events. Maintains monitoring and management tools (i.e. Scripts, Procedures...).

Level 1

Acts under guidance to record and track reliability data .

C4. Problem Management

Identifies and resolves the root cause of incidents.

Takes a proactive approach to the root cause of ICT problems.

Deploys a knowledge system based on recurrence of common errors.

Level 3

Exploits specialist knowledge and in-depth understanding of the ICT infrastructure and problem management process to identify failures and resolve with minimum outage. Makes sound decisions in emotionally charged environments on appropriate action required to minimise business impact. Rapidly identifies failing component, selects alternatives such as repair, replace or reconfigure.

D9. Personnel Development

Diagnoses individual and group competence, identifying skill needs and skill gaps. Reviews training and development options and selects appropriate methodology taking into account the needs of the individual and the business. Coaches and/ or mentors individuals and teams to address learning needs.

Level 3

Monitors and addressees the development needs of individuals and teams

D10. Information and Knowledge Management

Identifies and manages structured and unstructured information and considers information distribution policies.

Creates information structure to enable exploitation and optimisation of information for business benefit.

Understands appropriate tools to be deployed to create, extract, maintain, renew and propagate business knowledge in order to capitalise from the information asset.

Level 3

Analyses Business processes and associated information requirements and provides the most appropriate information structure.

3.1 Responsable des systèmes applicatifs

4/4

COMPETENCES (suite)

E4. Relationship Management

Establishes and maintains positive business relationships between the client and provider (internal or external) deploying and complying with organisational processes.

Maintains regular communication with client/partner/supplier, and addresses needs through empathy with their environment and managing supply chain communications.

Ensures that client/partner/supplier needs, concerns or complaints are understood and addressed in accordance with organisational policy.

Level 3

Accounts for own and others actions in managing a limited client base.

TENDANCES ET FACTEURS D'EVOLUTION

Le périmètre de travail du responsable d'un système applicatif peut englober plusieurs applications.

Peut évoluer vers des fonctions de chef de projet.

3.2 Concepteur - développeur

1/3

Analyste-programmeur	Analyste développement	Réalisateur en informatique
Analyste fonctionnel	Analyste réalisateur	Programmer

MISSION

À la demande de la maîtrise d'œuvre, et sur la base des spécifications fonctionnelles émises par celle-ci, le concepteur-développeur analyse, paramètre et code les composants logiciels applicatifs dans le respect des évolutions souhaitées, des normes et des procédures.

ACTIVITES ET TACHES

Analyse	Contribue à la définition des spécifications générales Réalise l'analyse technique et l'étude détaillée Adapte et paramètre les progiciels applicatifs (ERP) Réalise le prototypage		
Qualification	Élabore les jeux d'essais pour les tests unitaires d'intégration Effectue les tests unitaires Identifie et traite les dysfonctionnements		
Développement	Réalise les modules (objets et composants logiciels) Assemble les composants Rédige les documentations		
Maintenance	A en charge la maintenance corrective A en charge la maintenance évolutive Administre les composants logiciels réutilisables et met à jour la nomenclature de ces composants		

COMPETENCES (issues du référentiel de compétence européen)

	A6. Application Design	Level 1
A. PLAN	Defines the most suitable ICT solutions in accordance with ICT policy and user/customer needs. Accurately estimates development, installation and maintenance of application costs. Selects appropriate technical options for solution design, optimising the balance between cost and quality. Identifies a common reference framework to validate the models with representative users.	Contributes to the design and general functional specification and interfaces.
	A8. Sustainable Development	Level 3
	energy consumption. Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy. Applies an ICT purchasing and sales policy which fulfils eco-responsibilities	Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.

3.2 Concepteur - développeur

2/3

COMPETENCES (suite)

B1. Design and Development

Designs and engineers software and/ or hardware components to meet required specifications, including energy efficiency issues.

Follows a systematic methodology to analyse and build the required components and interfaces

Performs unit and system testing to ensure requirements are met.

Level 2

Systematically develops small components.

And Level 3

Acts creatively to develop and integrate components into a larger product.

And Level 4

Handles complexity by developing standard procedures and architectures in support of cohesive product development.

B2. Systems Integration

Installs additional hardware, software or sub system components into an existing or proposed system.

Complies with established processes and procedures (e.g. configuration management), taking into account the specification, capacity and compatibility of existing and new modules to ensure integrity and interoperability. Verifies system performance and ensures formal sign off and documentation of successful integration.

Level 2

Acts systematically to identify compatibility of software and hardware specifications.
Documents all activities during installation and records deviations and remedial activities.

B3. Testing

Constructs and executes systematic test procedures for IT systems or customer usability requirements to establish compliance with design specifications. Ensures that new or revised components or systems perform to expectation. Ensures meeting of internal, external, national and international standards; including health and safety, usability, performance, reliability or compatibility. Produces documents and reports to evidence certification requirements.

Level 2

Organises test programmes and builds scripts to stress test potential vulnerabilities. Records and reports outcomes providing analysis of results.

B4. Solution Deployment

Following predefined general standards of practice carries out planned necessary interventions to implement solution, including installing, upgrading or decommissioning.

Configures hardware, software or network to ensure interoperability of system components and debugs any resultant faults or incompatibilities.

Engages additional specialist resources if required, such as third party network providers.

Formally hands over fully operational solution to user and completes documentation recording all relevant information, including equipment addressees, configuration and performance data.

Level 2

Acts systematically to build or deconstruct system elements. Identifies non performing components and establishes root cause of failure within the overall solution. Provides support to less experienced colleagues.

3.2 Concepteur - développeur

3/3

COMPETENCES (suite)

BUILD

B5. Documentation Production

Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements.

Selects appropriate style and media for presentation materials.

Creates templates for document-management systems.

Ensures that functions and features are documented in an appropriate way.

Ensures that existing documents are valid and up to date.

COMPETENCES (issues du référentiel de compétence européen)

A5. Architecture Design

PLAN

Specifies, refines, updates and makes available a formal approach to implement solutions, necessary to develop and operate the IS architecture.

Manages the relationship with the business stakeholders to ensure that the architecture is in line with business requirements.

Identifies the need for change and the components involved; hardware, software, applications, processes, information and technology platform.

Ensures that all aspects take account of interoperability, scalability usability and security.

Level 3

Exploits specialist knowledge to define relevant ICT technology and specifications to be deployed in the construction of multiple ICT projects, applications or infrastructure improvements.

3.4 Intégrateur d'applications

2/3

COMPETENCES (suite)

A6. Application Design

Defines the most suitable ICT solutions in accordance with ICT policy and user/customer needs.

Accurately estimates development, installation and maintenance of application costs.

Selects appropriate technical options for solution design, optimising the balance between cost and quality.

Identifies a common reference framework to validate the models with representative users.

Level 1

Contributes to the design and general functional specification and interface

Or Level 3

Accounts for own and others actions in ensuring that the application is correctly integrated within a complex environment and complies with user/customer needs

B2. Systems Integration

Installs additional hardware, software or sub system components into an existing or proposed system.

Complies with established processes and procedures (e.g. configuration management), taking into account the specification, capacity and compatibility of existing and new modules to ensure integrity and interoperability.

Verifies system performance and ensures formal sign off and documentation of successful integration.

Level 4

Exploits wide ranging specialist knowledge to create a process for the entire integration cycle, including the establishment of internal standards of practice. Provides leadership to marshal and assign resources for programmes of integration.

B3. Testing

Constructs and executes systematic test procedures for IT systems or customer usability requirements to establish compliance with design specifications. Ensures that new or revised components or systems perform to expectation. Ensures meeting of internal, external, national and international standards; including health and safety, usability, performance, reliability or compatibility. Produces documents and reports to evidence certification requirements.

Level 2

Organises test programmes and builds scripts to stress test potential vulnerabilities. Records and reports outcomes providing analysis of results.

B4. Solution Deployment

- Respect du délai

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE	
Bac + 2 ou 3. Ou utilisateurs métiers qui évoluent vers la DSI	Première expérience en développement ou dans un projet de même nature	
Reconversion possible des développeurs grands système		

TENDANCES ET FACTEURS D'EVOLUTION

Difficultés d'évolution vers d'autres métiers (et notamment vers d'autres métiers du développement spécifique).

Doit prendre en compte les nouveaux standards liés aux architectures orientées service, SOA et Web 2.0.

4. MISE A DISPOSITION ET MAINTENANCE EN CONDITION OPERATIONNELLE DES INFRASTRUCTURES

Cette famille regroupe les métiers liés à **l'étude**, la **conception**, le **développement**, **l'intégration** et **l'exploitation** des infrastructures.

Elle comprend aussi les métiers liés au support IT interne à la DSI.

Cette famille comprend les métiers suivants :

- 4.1 Technicien d'exploitation
- 4.2 Technicien poste de travail
- 4.3 Technicien réseaux télécoms
- 4.4 Administrateur d'outils / de systèmes / de réseaux télécoms
- 4.5 Administrateur de bases de données
- 4.6 Intégrateur d'exploitation
- 4.7 Pilote d'exploitation
- 4.8 Expert systèmes d'exploitation
- 4.9 Expert réseaux télécoms
- 4.10 Architecte technique

4.1 Technicien d'exploitation

1/2

Exploitant informatique	Opérateur / pupitreur	Agent d'exploitation
Gestionnaire de supports	Pilote de ressources	Operator

MISSION

Le technicien d'exploitation assure la gestion courante de l'exploitation (hors réseau) dans le respect des plannings et de la qualité attendue. Il surveille le fonctionnement des équipements informatiques physiques et logiques du centre de production, dans le cadre des normes, méthodes d'exploitation et de sécurité.

ACTIVITES ET TACHES

	Exécute les travaux informatiques et restitue les résultats de la production dans le respect des plannings et de la qualité attendue	
	Supervise les impressions	
Exploitation	Suit le fonctionnement des ressources du site	
	Suit l'exploitation des systèmes et outils de production	
	Suit l'exploitation des applicatifs	
	Contrôle la gestion de la qualité des résultats	
	Gère les incidents d'exploitation (diagnostic, intervention, alerte)	
Gestion des	Effectue la maintenance applicative de dépannage de 1er niveau

conditions	Gère les supports magnétiques (disques, robots, automates)	
générales de production	Gère les ressources matérielles nécessaires	

COMPETENCES (issues du référentiel de compétence européen)

B2. Systems Integration

BUILD.

Installs additional hardware, software or sub system components into an existing or proposed system. Complies with established processes and procedures (e.g. configuration management), taking into account the specification, capacity and compatibility of existing and new modules to ensure integrity and interoperability. Verifies system performance and ensures formal sign off and documentation of successful integration.

Level 2

Acts systematically to identify compatibility of software and hardware specifications.

Documents all activities during installation and records deviations and remedial activities.

4.1 Technicien d'exploitation

2/2

COMPETENCES (suite)

C1. User Support

Responds to user requests and issues; records relevant information. Resolves or escalates incidents and optimises system performance. Monitors solution outcome and resultant customer satisfaction

Level 1

Routinely interacts with users, applies ICT-product, basic knowledge and skill to respond to user requests. Solves simple incidents, following prescribed procedures.

R

C3. Service Delivery

Takes proactive steps to ensure a stable and secure application and ICT infrastructure.

Updates operational document library and logs all operational events. Maintains monitoring and management tools (i.e. Scripts, Procedures...).

Level 1

Acts under guidance to record and track reliability data

C4. Problem Management

Identifies and resolves the root cause of incidents.

Takes a proactive approach to the root cause of ICT problems.

Deploys a knowledge system based on recurrence of common errors

Level 2

Identifies and classifies incident types and service interruptions. Records incidents cataloguing them by symptom and resolution.

MANAGE

E8. . Information Security Management

Implements information security policy. Monitors and takes action against intrusion, fraud and security breaches or leaks.

Ensures that security risks are analysed and managed with respect to enterprise data and information.

Reviews security incidents and makes recommendations for continuous security enhancement.

Level 2

Systematically scans the environment to identify and define vulnerabilities and threats.
Records and escalates noncompliance

INDICATEURS DE PERFORMANCE

• Respect des contrats de service (SLA)

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
Bac avec option informatique. Bac + 2	Possibilité de premier poste.

TENDANCES ET FACTEURS D'EVOLUTION

Ce métier est sujet à une réduction des effectifs liée :

- au regroupement des serveurs
- à la réduction du nombre de centres d'exploitation.
- à l'utilisation de sous-traitance
- à l'externalisation des ressources

1/4

Technicien micro	Technicien d'assistance maintenance	Assistant Micro
Desktop Technician		

MISSION

Dans le cadre de projets de déploiement, il assure l'installation et la garantie de fonctionnement des équipements informatiques et/ou téléphoniques (matériels et logiciels) liés au poste de travail. À la demande des utilisateurs, il assure la maintenance (à distance ou sur site) de ces équipements et traite les incidents.

ACTIVITES ET TACHES

Installation, tests et recettes	Effectue l'installation initiale des équipements informatiques et/ou téléphoniques (applications, matériel micro, matériels de téléphonie et péritéléphonie) Installe les mises à jour Télédistribue les applications suivant un plan de déploiement Effectue les tests et recettes utilisateurs des équipements informatiques et/ou téléphoniques
Exploitation	Traite les incidents à distance sur micros, réseaux, messagerie ou téléphonie Gère l'exploitation sur incident Diagnostique et traite les incidents Gère le parc informatique connecté au réseau
Maintenance, administration et sécurité	Suit l'évolution de l'équipement Administre la messagerie sur la partie cliente du poste de travail (connexion, exploitation) Définit les données de télédistribution (cibles, profils, dépendances) et de télémaintenance Contrôle la conformité des équipements avec les référentiels
Support	Aide à la prise en main des équipements et logiciels installés

COMPETENCES (issues du référentiel de compétence européen)

	A8. Sustainable Development	Level 3
A. PLAN	Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption. Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy. Applies an ICT purchasing and sales policy which fulfils eco-responsibilities	Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.
	B2. Systems Integration	Level 2
B. BUILD	Installs additional hardware, software or sub system components into an existing or proposed system. Complies with established processes and procedures (e.g. configuration management), taking into account the specification, capacity and compatibility of existing and new modules to ensure integrity and interoperability. Verifies system performance and ensures formal sign off and documentation of successful integration.	Acts systematically to identify compatibility of software and hardware specifications. Documents all activities during installation and records deviations and remedial activities.

2/1

COMPETENCES (suite)

B3. Testing

Constructs and executes systematic test procedures for IT systems or customer usability requirements to establish compliance with design specifications. Ensures that new or revised components or systems perform to expectation. Ensures meeting of internal, external, national and international standards; including health and safety, usability, performance, reliability or compatibility. Produces documents and reports to evidence certification requirements. Takes proactive steps to ensure a stable and secure application and ICT infrastructure.

Updates operational document library and logs all operational events. Maintains monitoring and management tools (i.e. Scripts, Procedures...).

Level 1

Performs simple tests in strict compliance with detailed instructions

B4. Solution Deployment

Following predefined general standards of practice carries out planned necessary interventions to implement solution, including installing, upgrading or decommissioning.

Configures hardware, software or network to ensure interoperability of system components and debugs any resultant faults or incompatibilities. Engages additional specialist resources if required, such as third party network

Formally hands over fully operational solution to user and completes documentation recording all relevant information, including equipment addressees, configuration and performance data.

Level 1

Performs under guidance and in accordance with detailed instructions, the removal or installation of individual components.

B5. Documentation Production

Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements.

Selects appropriate style and media for presentation materials.

Creates templates for document-management systems. Ensures that functions and features are documented in an appropriate way.

Ensures that existing documents are valid and up to date

Level 1

Uses and applies standards to define document structure.

C1. User Support

providers.

Responds to user requests and issues; records relevant information. Resolves or escalates incidents and optimises system performance.

Monitors solution outcome and resultant customer satisfaction Identifies and resolves the root cause of incidents.

Takes a proactive approach to the root cause of ICT problems.

Deploys a knowledge system based on recurrence of common errors

Level 2

Systematically interprets user problems identifying the solutions and possible side effects. Uses experience to identifying user problems and interrogates database for potential solutions. Escalates complex or unresolved incidents to senior experts. Records and tracks user support procedures from outset to conclusion.

2//

COMPETENCES (suite)

C2. Change Support

Implements and provides guidance for the evolution of an IT solution.

Efficiently controls and schedules software or hardware modifications to prevent multiple upgrades creating unpredictable outcomes.

Minimises service disruption as a consequence of changes and adheres to defined service level agreement (SLA).

Level 2

During change, acts systematically to respond to day by day operational needs and react to them, avoiding service disruptions and maintaining coherence to service level agreement (SLA).

ŀ

C3. Service Delivery

Takes proactive steps to ensure a stable and secure application and ICT infrastructure.

Updates operational document library and logs all operational events. Maintains monitoring and management tools (i.e. Scripts, Procedures...).

Level 1

Acts under guidance to record and track reliability data

C4. Problem Management

Identifies and resolves the root cause of incidents.

Takes a proactive approach to the root cause of ICT problems.

Deploys a knowledge system based on recurrence of common errors

Level 2

Identifies and classifies incident types and service interruptions. Records incidents cataloguing them by symptom and resolution.

NANAGE

Groupware Administrator Lan Administrator Voice Communications Administrator

E-mail Administrator EDI Administrator Analyste système

MISSION

Il installe, met en production, administre et exploite les moyens informatiques d'un ou plusieurs sites informatiques.

Il participe au bon fonctionnement des systèmes d'information en garantissant le maintien à niveau des différents outils et/ou infrastructures des logiciels systèmes et/ou infrastructures de communication (locale, étendue, voix, image, architecture centralisée ou client-serveur), dans un objectif de qualité, de productivité et de sécurité.

ACTIVITES ET TACHES

7.6.1.1.1.2.2.1.17.6.1.2.5		
Administration	Est responsable du fonctionnement optimal des outils, systèmes ou réseaux dont il a la charge Met en œuvre les outils garantissant la cohérence des données Possède une vision globale et actualisée des systèmes d'information ainsi qu'une bonne connaissance de l'entreprise Effectue un inventaire permanent et gère les différentes composantes des différents réseaux Suit et analyse les performances, met en place des mesures susceptibles d'améliorer la qualité ou la productivité de l'outil Elabore les règles d'utilisation de l'outil, en conformité avec les normes et standards de l'entreprise et dans le respect des contrats de service. Documente, Promeut et contrôle leur application Organise et optimise les ressources de son domaine	
Exploitation	Valide l'installation et l'intégration des nouveaux outils (systèmes, ou réseaux et télécoms) dans l'environnement de production Gère les droits d'accès aux serveurs et aux applications en fonction des profils Traite les incidents ou anomalies à partir des demandes internes : diagnostic de l'incident, identification, formulation et suivi de sa résolution	
Support	Participe aux actions de maintenance correctrice en veillant à leur qualité Propose des améliorations pour optimiser les ressources existantes et leur organisation Effectue le transfert de compétences et l'assistance technique des procédures aux équipes d'exploitation et participe éventuellement à leur formation	
Maintenance et sécurité	Gère les accès aux ressources du SI (en général) Gère les évolutions et la maintenance des matériels, des logiciels et du système Gère les performances (seuils d'alerte et tuning des ressources et produits du domaine)	
Études	Effectue des études de préconisation et d'implantation des matériels, outils et logiciels adaptés Effectue une veille technologique sur les différents aspects de l'infrastructure système et de communication (matériels, logiciels, architecture, protocole, mode de transferts)	

2/4

COMPETENCES (issues du référentiel de compétence européen)

B2. Systems Integration

Installs additional hardware, software or sub system components into an existing or proposed system. Complies with established processes and procedures (e.g. configuration management), taking into account the specification, capacity and compatibility of existing and new modules to ensure integrity and interoperability. Verifies system performance and ensures formal sign off and documentation of successful integration.

Level 3

Accounts for own and others actions in the integration process. Complies with appropriate standards and change control procedures to maintain integrity of the overall system functionality and reliability.

B3. Testing

Constructs and executes systematic test procedures for IT systems or customer usability requirements to establish compliance with design specifications. Ensures that new or revised components or systems perform to expectation. Ensures meeting of internal, external, national and international standards; including health and safety, usability, performance, reliability or compatibility. Produces documents and reports to evidence certification requirements. Takes proactive steps to ensure a stable and secure application and ICT infrastructure.

Level 2

Organises test programmes and builds scripts to stress test potential vulnerabilities. Records and reports outcomes providing analysis of results.

Updates operational document library and logs all operational events. Maintains monitoring and management tools (i.e. Scripts, Procedures...).

B4. Solution Deployment

Following predefined general standards of practice carries out planned necessary interventions to implement solution, including installing, upgrading or decommissioning.

Configures hardware, software or network to ensure interoperability of system components and debugs any resultant faults or incompatibilities.

Engages additional specialist resources if required, such as third party network providers.

Formally hands over fully operational solution to user and completes documentation recording all relevant information, including equipment addressees, configuration and performance data.

Level 2

Acts systematically to build or deconstruct system elements. Identifies non performing components and establishes root cause of failure within the overall solution. Provides support to less experienced colleagues.

B5. Documentation Production

Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements.

Selects appropriate style and media for presentation materials.

Creates templates for document-management systems. Ensures that functions and features are documented in an appropriate way.

Ensures that existing documents are valid and up to date

Level 2

Determines documentation requirements taking into account the purpose and environment to which it applies.

Acts systematically to build or deconstruct system elements. Identifies non performing components and establishes root cause of failure within the overall solution. Provides support to less experienced colleagues.

B5. Documentation Production

Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements.

Selects appropriate style and media for presentation materials.

Creates templates for document-management systems. Ensures that functions and features are documented in an appropriate way.

Ensures that existing documents are valid and up to date

Level 2

Determines documentation requirements taking into account the purpose and environment to which it applies.

C1. User Support

Responds to user requests and issues; records relevant information. Resolves or escalates incidents and optimises system performance.

Monitors solution outcome and resultant customer satisfaction Identifies and resolves the root cause of incidents.

Takes a proactive approach to the root cause of ICT problems.

Deploys a knowledge system based on recurrence of common errors

Level 2

Systematically interprets user problems identifying the solutions and possible side effects. Uses experience to identifying user problems and interrogates database for potential solutions. Escalates complex or unresolved incidents to senior experts. Records and tracks user support procedures from outset to conclusion.

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

96

Z

4.6 Intégrateur d'exploitation

2/2

COMPETENCES (suite)

C2. Change Support

Implements and provides guidance for the evolution of an IT solution.

Efficiently controls and schedules software or hardware modifications to prevent multiple upgrades creating unpredictable outcomes.

Minimises service disruption as a consequence of changes and adheres to defined service level agreement (SLA).

Level 3

Ensures the integrity of the system by controlling the application of functional updates, software or hardware additions and maintenance activities. Complies with budget requirements.

C3. Service Delivery

Takes proactive steps to ensure a stable and secure application and ICT infrastructure.

Updates operational document library and logs all operational events. Maintains monitoring and management tools (i.e. Scripts, Procedures...).

Level 2

Systematically analyses performance data and communicates findings to senior experts. Escalates potential service level failures and recommends actions to improve service reliability. Tracks reliability data against service level agreement.

C4. Problem Management

Identifies and resolves the root cause of incidents.

Takes a proactive approach to the root cause of ICT problems.

Deploys a knowledge system based on recurrence of common errors

Level 2

Identifies and classifies incident types and service interruptions. Records incidents cataloguing them by symptom and resolution. .

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
Bac + 2.	Un minimum de 2 ou 3 ans dans la production informatique.

TENDANCES ET FACTEURS D'EVOLUTION

Le développement des systèmes ouverts multiplie le nombre des outils et des serveurs pilotés et accroît le pilotage à distance (télépilotage).

L'automatisation croissante des activités de surveillance et des procédures de contrôle conduit à un regroupement du pilotage global avec une focalisation de l'activité de surveillance de serveurs.

À terme, l'évolution du niveau de fiabilité des systèmes requerra une complète autonomie du métier.

1 / 1

Ingénieur système

Expert en OS

Spécialiste système

MISSION

Il assure un rôle de conseil, d'assistance, d'information, de formation et d'alerte. Il peut intervenir directement sur tout ou partie d'un projet qui relève de son domaine d'expertise.

L'expert système d'exploitation effectue une veille technologique, il participe aux études de l'architecture technique générale et de son évolution ainsi qu'à la qualification des plates-formes informatiques.

ACTIVITES ET TACHES

Participation aux études et développement	Conduit les études pour la définition des systèmes en fonction des besoins Intervient dans le choix des fournisseurs
Soutien auprès des équipes	Assiste et conseille dans la mise en œuvre des solutions techniques Diagnostique les causes de dysfonctionnement et propose des corrections et des solutions de rechange Informe les équipes des évolutions techniques du système Forme à l'utilisation des nouveaux systèmes
Prospective	Effectue la veille technologique Propose des solutions pour améliorer les performances des systèmes
Mise en place et évolutions	Est l'interface reconnue des experts des autres domaines Définit les règles de bonne gestion des systèmes d'exploitation Qualifie les systèmes d'un point de vue technique et fonctionnel Vérifie l'application des normes (sécurité informatique, qualité) Certifie les composants et d'applications développées
Ouverture externe	Participe aux colloques, forums, groupes de travail Enseignement, émet des publications

COMPETENCES (issues du référentiel de compétence européen)

A5. Architecture Design

A. PLAN

Specifies, refines, updates and makes available a formal approach to implement solutions, necessary to develop and operate the IS architecture. Manages the relationship with the business stakeholders to ensure that the architecture is in line with business requirements. Identifies the need for change and the components involved; hardware, software, applications, processes, information and technology platform. Ensures that all aspects take account of interoperability, scalability usability and security.

Level 4

Acts with wide ranging accountability to define the strategy to implement ICT technology compliant with business need. Takes account of the current technology platform, obsolescent equipment and latest technological innovations

2/4

COMPETENCES (suite)

A6. Application Design

Defines the most suitable ICT solutions in accordance with ICT policy and user/customer needs.

Accurately estimates development, installation and maintenance of application costs.

Selects appropriate technical options for solution design, optimising the balance between cost and quality.

Identifies a common reference framework to validate the models with representative users.

A7. Technology Watching

Explores latest ICT technological developments to establish understanding of evolving technologies.

Devises innovative solutions for integration of new technology into existing products, applications or services or for the creation of new solutions.

Level 1

Contributes to the design and general functional specification and interfaces.

Level 4

Exploits wide ranging specialist knowledge of new and emerging technologies, coupled with a deep understanding of the business, to envision and articulate the solutions of the future. Provides expert guidance and advice, to the leadership teams in business and in technology, about potential innovations to support strategic decision-making.

B1. Design and Development

Designs and engineers software and/ or hardware components to meet required specifications, including energy efficiency issues.

Follows a systematic methodology to analyse and build the required components and interfaces.

Performs unit and system testing to ensure requirements are met.

Level 3

Acts creatively to develop and integrate components into a larger product.

B2. Systems Integration

Installs additional hardware, software or sub system components into an existing or proposed system.

Complies with established processes and procedures (e.g. configuration management), taking into account the specification, capacity and compatibility of existing and new modules to ensure integrity and interoperability.

Verifies system performance and ensures formal sign off and documentation of successful integration.

Level 2

Acts systematically to identify compatibility of software and hardware specifications.

Documents all activities during installation and records deviations and remedial activities.

2//

COMPETENCES (suite)

B3. Testing

Constructs and executes systematic test procedures for IT systems or customer usability requirements to establish compliance with design specifications. Ensures that new or revised components or systems perform to expectation. Ensures meeting of internal, external, national and international standards; including health and safety, usability, performance, reliability or compatibility. Produces documents and reports to evidence certification requirements.

Level 3

Exploits specialist knowledge to supervise complex testing programmes. Ensures tests and results are documented to provide input to subsequent process owners such as designers, users or maintainers. Accountable for compliance with testing procedures including a documented audit trail

B4. Solution Deployment

Following predefined general standards of practice carries out planned necessary interventions to implement solution, including installing, upgrading or decommissioning.

Configures hardware, software or network to ensure interoperability of system components and debugs any resultant faults or incompatibilities. Engages additional specialist resources if required, such as third party network

Formally hands over fully operational solution to user and completes documentation recording all relevant information, including equipment addressees, configuration and performance data.

Level 3

Accounts for own and others actions within solution provision activities including comprehensive communications with client.
Exploits specialist knowledge to influence solution construction.
Gives advice on aligning work processes and procedures with software upgrades.

B5. Documentation Production

Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements.

Selects appropriate style and media for presentation materials.

Creates templates for document-management systems.

Ensures that functions and features are documented in an appropriate way.

Ensures that existing documents are valid and up to date.

Level 2

Determines documentation requirements taking into account the purpose and environment to which it applies.

C4. Problem Management

Identifies and resolves the root cause of incidents.

Takes a proactive approach to the root cause of ICT problems.

Deploys a knowledge system based on recurrence of common errors.

Level 3

Exploits specialist knowledge and in-depth understanding of the ICT infrastructure and problem management process to identify failures and resolve with minimum outage. Makes sound decisions in emotionally charged environments on appropriate action required to minimise business impact. Rapidly identifies failing component, selects alternatives such as repair, replace or reconfigure.

1/1

COMPETENCES (suite)

. ENABLI

D3. Education and Training Provision

Defines and implements ICT training policy to address organisational skill needs and gaps.

Structures, organises and schedules training programmes and evaluates training quality through a feedback process and implements continuous improvement. Adapts training plans to address changing demand.

Level 2

Organises the identification of training needs; collates organisation requirements, identifies, selects and prepares schedule of training interventions.

MANAGE

E3. Risk Management

Implements the management of risk across information systems through the application of the enterprise defined risk management policy and procedure. Assesses risk to the organizations business, and documents potential risk and containment plans.

Level 2

Understands and applies the principles of risk management and investigates ICT solutions to mitigate identified risks

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

A7. Technology Watching

ġ

Explores latest ICT technological developments to establish understanding of evolving technologies.

Devises innovative solutions for integration of new technology into existing products, applications or services or for the creation of new solutions.

Level 5

Provides strategic leadership. Envisions and articulates future solutions and directs the organisation to build and exploit them.

2/4

COMPETENCES (suite)

PLAN

A8. Sustainable Development

Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption.

Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy.

Applies an ICT purchasing and sales policy which fulfils eco-responsibilities.

Level 3

Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.

B1. Design and Development

Designs and engineers software and/ or hardware components to meet required specifications, including energy efficiency issues.

Follows a systematic methodology to analyse and build the required components and interfaces.

Performs unit and system testing to ensure requirements are met.

Level 4

Handles complexity by developing standard procedures and architectures in support of cohesive product development

B2. Systems Integration

Installs additional hardware, software or sub system components into an existing or proposed system.

Complies with established processes and procedures (e.g. configuration management), taking into account the specification, capacity and compatibility of existing and new modules to ensure integrity and interoperability.

Verifies system performance and ensures formal sign off and documentation of successful integration.

Level 3

Accounts for own and others actions in the integration process. Complies with appropriate standards and change control procedures to maintain integrity of the overall system functionality and reliability.

BUILD

B3. Testing

Constructs and executes systematic test procedures for IT systems or customer usability requirements to establish compliance with design specifications. Ensures that new or revised components or systems perform to expectation. B5. Documentation Production

Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements.

Selects appropriate style and media for presentation materials.

Creates templates for document-management systems.

Ensures that functions and features are documented in an appropriate way.

Ensures that existing documents are valid and up to date.

Level 3

Adapts the level of detail according to the objective of the documentation and the targeted population.

2/4

COMPETENCES (suite)

C2. Change Support

Implements and provides guidance for the evolution of an IT solution. Efficiently controls and schedules software or hardware modifications to prevent multiple upgrades creating unpredictable outcomes.

Minimises service disruption as a consequence of changes and adheres to defined service level agreement (SLA).

Level 3

Ensures the integrity of the system by controlling the application of functional updates, software or hardware additions and maintenance activities. Complies with budget requirements.

D1. Information Security Strategy Development

Defines and makes applicable a formal organisational strategy, scope and culture to maintain safety and security of information.

Provides the foundation for Information Security Management, including role identification and accountability (ref D.2).

Uses defined standards to create objectives for information integrity, availability, and data privacy.

Level 4

Exploits depth of expertise and leverages external standards and best practices.

E3. Risk Management

Implements the management of risk across information systems through the application of the enterprise defined risk management policy and procedure. Assesses risk to the organizations business, and documents potential risk and containment plans.

Level 3

Decides on appropriate actions required to adapt security and address risk exposure. Evaluates, manages and ensures validation of exceptions; audits ICT processes and environment

E5. Process Improvement

Measures effectiveness of existing ICT processes.

Researches and benchmarks ICT process design from a variety of sources. Follows a systematic methodology to evaluate, design and implement process or technology changes for measurable business benefit.

Assesses potential adverse consequences of process change.

Level 3

Exploits specialist knowledge to research existing ICT processes and solutions in order to define possible innovations. Makes recommendations based on reasoned arguments

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

LIVRABLES

- Définition d'architecture technique opérationnelle
- Référentiel d'architecture (cartographie technique du ou des SI)
- Notes d'information et de préconisation

INDICATEURS DE PERFORMANCE

• Mesure de l'agilité et de la réactivité de l'infrastructure technique à un changement donné (délai de prise en compte et coût d'un changement d'ordre technique)

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE	
Bac + 5 ingénieur	Minimum 5 à 10 ans. (exploitation, développement, conduite de projet).	

TENDANCES ET FACTEURS D'EVOLUTION

Complexification et rapidité d'évolution des systèmes aussi bien sur un plan technique que fonctionnel.

Nécessité d'intégrer dans le système d'information des éléments exogènes (progiciels, plates-formes de convergence...).

Nécessité de maîtriser le risque de perte d'intégrité du système d'information dans un contexte d'accélération des évolutions (techniques, concurrentielles, organisationnelles...)

5. SUPPORT ET ASSISTANCE AUX UTILISATEURS

Cette famille regroupe les métiers tournés vers l'utilisateur ou usager du SI en termes d'assistance et d'accompagnement.

Cette famille comprend les métiers suivants :

- 5.1 Assistant fonctionnel
- 5.2 Technicien support utilisateurs

5.1 Assistant fonctionnel

Assistant support logiciel

Correspondant utilisateurs

Correspondant informatique Pilote fonctionnel d'application

Field Analyst

MISSION

Chargé du support applicatif et logiciel

Référent Métier, il apporte à l'utilisateur final une aide en matière d'utilisation de logiciels, en période de déploiement ou en régime de croisière, et contribue à résoudre toute difficulté que celui-ci rencontre.

Il contribue à la conduite du changement.

Il signale aux acteurs projet les demandes d'évolutions et les dysfonctionnements.

Plutôt spécialisé sur un métier ou un processus, il aide et conseille l'utilisateur final à bien utiliser ses outils logiciels.

À la jonction de la DSI (maître d'œuvre) et du client (direction, maîtrise d'ouvrage, utilisateurs), il intervient directement auprès des utilisateurs

ACTIVITES ET TACHES

Anticipation et conduite du changement	Lors de l'installation de nouveaux logiciels bureautiques ou métiers : Aide à la définition des formations et participe à leur réalisation Accompagne les utilisateurs Capitalise le partage des expériences
Assistance et conseil auprès de l'utilisateur final	En régime de croisière : Conseille les utilisateurs Détecte les utilisateurs en difficulté Recense et répercute les améliorations fonctionnelles souhaitées Intervient en 1er niveau lors des incidents en sollicitant les ressources (internes ou externes) nécessaires
Vérification de la qualité et de la performance du fonctionnement des applications de son domaine SI	Contrôle et suit les dossiers avant transmission au Métier Veille au respect de la qualité et de la cohérence des réponses apportées aux utilisateurs Réalise une analyse qualitative et quantitative des actions de son domaine de responsabilité

5.1 Assistant fonctionnel

2/3

COMPETENCES (issues du référentiel de compétence européen)

B4. Solution Deployment

Following predefined general standards of practice carries out planned necessary interventions to implement solution, including installing, upgrading or decommissioning.

Configures hardware, software or network to ensure interoperability of system components and debugs any resultant faults or incompatibilities.

Engages additional specialist resources if required, such as third party network providers.

Formally hands over fully operational solution to user and completes documentation recording all relevant information, including equipment addressees, configuration and performance data.

Level 1

Performs under guidance and in accordance with detailed instructions, the removal or installation of individual components.

C1. User Support

Responds to user requests and issues; records relevant information. Resolves or escalates incidents and optimises system performance. Monitors solution outcome and resultant customer satisfaction.

Level 2

Systematically interprets user problems identifying the solutions and possible side effects. Uses experience to identifying user problems and interrogates database for potential solutions. Escalates complex or unresolved incidents to senior experts. Records and tracks user support procedures from outset to conclusion.

C2. Change Support

Implements and provides guidance for the evolution of an IT solution. Efficiently controls and schedules software or hardware modifications to prevent multiple upgrades creating unpredictable outcomes.

Minimises service disruption as a consequence of changes and adheres to defined service level agreement (SLA).

Level 2

During change, acts systematically to respond to day by day operational needs and react to them, avoiding service disruptions and maintaining coherence to service level agreement (SLA).

C3. Service Delivery

Takes proactive steps to ensure a stable and secure application and ICT infrastructure.

Updates operational document library and logs all operational events. Maintains monitoring and management tools (i.e. Scripts, Procedures...).

Level 2

Systematically analyses performance data and communicates findings to senior experts. Escalates potential service level failures and recommends actions to improve service reliability. Tracks reliability data against service level agreement.

5.1 Assistant fonctionnel

3/3

COMPETENCES (suite)

D3. Education and Training Provision

Defines and implements ICT training policy to address organisational skill needs and gaps.

Structures, organises and schedules training programmes and evaluates training quality through a feedback process and implements continuous improvement. Adapts training plans to address changing demand.

Level 2

Organises the identification of training needs; collates organisation requirements, identifies, selects and prepares schedule of training interventions.

D10. Information and Knowledge Management

Identifies and manages structured and unstructured information and considers information distribution policies.

Creates information structure to enable exploitation and optimisation of information for business benefit.

Understands appropriate tools to be deployed to create, extract, maintain, renew and propagate business knowledge in order to capitalise from the information

Level 3

Analyses Business processes and associated information requirements and provides the most appropriate information structure.

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

TENDANCES ET FACTEURS D'EVOLUTION

Regroupement des fonctions d'assistance multiservices (informatique, logistique immobilière, etc.).

6. SUPPORT METHODE, QUALITE ET SECURITE

Cette famille regroupe tous les métiers liés à la définition, la mise en place, le **contrôle** et **suivi** (audit) des normes et référentiels **qualité**, **méthode** et **sécurité**, en phase avec la gouvernance de la DSI.

Cette famille comprend les métiers suivants :

- 6.1 Expert méthode et outils / qualité / sécurité
- 6.2 Manager de contrat
- 6.3 Responsable sécurité des Systèmes d'Information RSSI

1/5

Ingénieur sécurité informatique et télécoms	Ingénieur méthodes informatiques	Ingénieur qualité	
Quality Assurance Engineer	Security Specialist	Disaster Recovery Specialist	

MISSION

Il assure un rôle de conseil, d'assistance, d'information de formation et d'alerte. Il peut intervenir directement sur tout ou partie d'un projet qui relève de son domaine d'expertise.

Il effectue un travail de veille technologique sur son domaine et propose des évolutions qu'il juge nécessaires.

Il est l'interlocuteur reconnu des experts externes (fournisseurs, partenaires...).

ACTIVITES ET TACHES

Il s'agit a priori de métiers différents regroupés sur une seule fiche dans un souci de synthèse qui peuvent ou non selon les organisations être tenus par des personnes différentes.

organisations etre tenas par des personnes differentes.		
Conseil et support auprès des équipes	Assiste et conseille dans le choix et l'utilisation des méthodes Informe sur les évolutions Forme aux nouvelles technologies et systèmes Participe aux études et développement & conduite d'études ponctuelles	
Mise en place des évolutions et certifications	Définit et gère des normes, méthodes, outils et référentiels Met en place les normes, méthodes et outils et en vérifie l'application Certifie des composants et applications développées	
Ouverture externe	Effectue de la veille et de l'évaluation prospective technologique Participe aux colloques, forums, groupes de travail Enseigne, publie	

COMPETENCES (issues du référentiel de compétence européen)

A7. Technology Watching

Explores latest ICT technological developments to establish understanding of evolving technologies.

Devises innovative solutions for integration of new technology into existing products, applications or services or for the creation of new solutions.

Level 4

Systematically interprets user problems identifying the solutions and possible side effects. Uses experience to identifying user problems and interrogates database for potential solutions. Escalates complex or unresolved incidents to senior experts. Records and tracks user support procedures from outset to conclusion.

2/5

COMPETENCES (suite)

. PLAN

A8. Sustainable Development

Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption.

Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy.

Applies an ICT purchasing and sales policy which fulfils eco-responsibilities.

Level 3

Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.

Produce

B5. Documentation Production

Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements.

Selects appropriate style and media for presentation materials.

Creates templates for document-management systems.

Ensures that functions and features are documented in an appropriate way. Ensures that existing documents are valid and up to date.

Level 3

Adapts the level of detail according to the objective of the documentation and the targeted population.

D1. Information Security Strategy Development

Defines and makes applicable a formal organisational strategy, scope and culture to maintain safety and security of information.

Provides the foundation for Information Security Management, including role identification and accountability (ref D.2).

Uses defined standards to create objectives for information integrity, availability, and data privacy.

Level 4

Exploits depth of expertise and leverages external standards and best practices.

D2. ICT Quality Strategy Development

Defines, improves and refines a formal strategy to satisfy customer expectations and improve business performance (balance between cost and risks). Identifies critical processes influencing service delivery and product performance for definition in the ICT quality management system (ref D.4).

Uses defined standards to formulate objectives for service management, product and process quality.

Identifies ICT quality management accountability.

Level 4

Exploits wide ranging specialist knowledge to leverage and authorise the application of external standards and best practices.

D3. Education and Training Provision

Defines and implements ICT training policy to address organisational skill needs and gaps.

Structures, organises and schedules training programmes and evaluates training quality through a feedback process and implements continuous improvement. Adapts training plans to address changing demand.

Level 3

Acts creatively to analyse skills gaps; elaborates specific requirements and identifies potential sources for training provision. Has specialist knowledge of the training market and establishes a feedback mechanism to assess the added value of alternative training programmes.

3/5

COMPETENCES (suite)

D9. Personnel Development

Diagnoses individual and group competence, identifying skill needs and skill gaps. Reviews training and development options and selects appropriate methodology taking into account the needs of the individual and the business. Coaches and/or mentors individuals and teams to address learning needs

groups, holds courses of instruction.

Briefs/ trains individuals and

D10. Information and Knowledge Management

Identifies and manages structured and unstructured information and considers information distribution policies.

Creates information structure to enable exploitation and optimization of information for business benefit.

Understands appropriate tools to be deployed to create, extract, maintain, renew and propagate business knowledge in order to capitalize from the information asset.

Level 5

Level 2

Correlates information and knowledge to create value for the business. Applies innovative solutions based on information retrieved.

E3. Risk Management

Implements the management of risk across information systems through the application of the enterprise defined risk management policy and procedure. Assesses risk to the organisations business, and documents potential risk and containment plans.

Level 3

Decides on appropriate actions required to adapt security and address risk exposure. Evaluates, manages and ensures validation of exceptions; audits ICT processes and environment

E4. Relationship Management

Establishes and maintains positive business relationships between the client and provider (internal or external) deploying and complying with organizational processes.

Maintains regular communication with client/partner/supplier, and addresses needs through empathy with their environment and managing supply chain communications.

Ensures that client/partner/supplier needs, concerns or complaints are understood and addressed in accordance with organizational policy.

Level 2

Positively interacts with clients.

4/5

COMPETENCES (suite)

E5. Process Improvement

Measures effectiveness of existing ICT processes. Researches and benchmarks ICT process design from a variety of sources. Follows a systematic methodology to evaluate, design and implement process or technology changes for measurable business benefit.

Assesses potential adverse consequences of process change.

Level 3

Exploits specialist knowledge to research existing ICT processes and solutions in order to define possible innovations.

Makes recommendations based on reasoned arguments

And Level 4

Provides leadership and authorizes implementation of innovations and improvements that will enhance competitiveness or efficiency. Demonstrates to senior management the business advantage of potential changes

E6. ICT Quality Management

Implements ICT quality policy to maintain and enhance service and product provision.

Plans and defines indicators to manage quality with respect to ICT strategy. Reviews quality performance indicators and recommends enhancements to influence continuous quality improvement.

Level 2

Communicates and monitors application of the organizations quality policy

And Level 3

Evaluates quality management indicators and processes based on ICT quality policy and proposes remedial action

And Level 4

Assesses and estimates the degree to which quality requirements have been met and provides leadership for quality policy implementation. Provides cross functional leadership for setting and exceeding quality standards

5/5

COMPETENCES (suite)

E8. Information Security Management

Implements information security policy. Monitors and takes action against intrusion, fraud and security breaches or leaks.

Ensures that security risks are analysed and managed with respect to enterprise data and information.

Reviews security incidents and makes recommendations for continuous security enhancement.

Level 2

Systematically scans the environment to identify and define vulnerabilities and threats.
Records and escalates noncompliance

And Level 3

Evaluates security management measures and indicators and decides if compliant to information security policy. Investigates and instigates remedial measures to address any security breaches

And Level 4

Provides leadership for the integrity, confidentiality and availability of data stored on information systems and complies with all legal requirements

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

Evaluates quality management indicators and processes based on ICT quality policy and proposes remedial action

E7. Business Change Management

Assesses the implications of new IT solutions. Defines the requirements and quantifies the business benefits.

Manages the deployment of change taking into account structural and cultural issues.

Maintains business and process continuity throughout change, monitoring the impact, taking any required remedial action and refining approach

Level 4

Provides leadership to plan, manage and implement significant IT led business change

7.2 Responsable d'entité

2/2

COMPETENCES (suite)

E8. Information Security Management

Implements information security policy. Monitors and takes action against intrusion, fraud and security breaches or leaks.

Ensures that security risks are analysed and managed with respect to enterprise data and information.

Reviews security incidents and makes recommendations for continuous security enhancement.

Level 3

Evaluates security management measures and indicators and decides if compliant to information security policy. Investigates and instigates remedial measures to address any security breaches

E9. IT Governance

Defines, deploys and controls the management of information systems in line with business imperatives.

Takes into account all internal and external parameters such as legislation and industry standard compliance to influence risk management and resource deployment to achieve balanced business benefit.

Level 4

Provides leadership for IT governance strategy by communicating, propagating and controlling relevant processes across the entire IT infrastructure.

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

LIVRABLES

- Un ensemble de prestations respectant les critères de délai et de qualité, et satisfaction clients (utilisateurs internes ou externes à l'entreprise)
- Adéquation des compétences de l'entité avec le service attendu

INDICATEURS DE PERFORMANCE

- Respect des délais et des budgets
- Progression des compétences de l'entité

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
Rac + 5	5 à 10 ans d'expérience dans le domaine des SI dont 3 à 4 ans d'expérience dans le management d'équipe.

TENDANCES ET FACTEURS D'EVOLUTION

Ce métier requiert de plus en plus de compétences de gestionnaire, de manager et une connaissance des besoins fonctionnels de ses clients ainsi qu'une dimension internationale.

il est néanmoins soumis aux modifications de l'environnement et du fonctionnement de l'entreprise et aux évolutions des exigences liées au service client.

Professionnalisation nécessaire des relations clients-fournisseurs (contrats de service..)

Industrialisation des activités de son entité (intégration de plus en plus fine dans les démarches de type processus)

Anticipation des impacts des évolutions technologiques.

1/5

MISSION

Le responsable télécoms et réseaux est chargé de définir et mettre en application dans le cadre du schéma directeur informatique la stratégie Réseaux et Télécoms de l'entreprise.

Son champ d'action recouvre les services de données et éventuellement de voix : rattaché à la DSI sur la partie données, la téléphonie est souvent gérée localement par établissement ou par pays.

ACTIVITES ET TACHES

Cette fonction n'est plus une fonction exclusivement technique. Elle requiert de plus en plus des activités de gestionnaire et de manager qui sont décrites dans la fiche 7.2 et qui ne seront pas reprises ici.

manager qui sont décrites dans la fiche 7.2 et qui ne seront pas reprises ici.		
Définition et conception de l'architecture télécom	Définit des besoins et les choix de l'architecture télécoms et réseaux Valide les choix et leur compatibilité avec l'architecture informatique et les standards technologiques du groupe et des partenaires	
Continuité de service	Est responsable de l'exploitation et de l'administration des réseaux et services à valeur ajoutée Etablit un tableau de bord sur la qualité du service réseau Fournit support et assistance dans l'utilisation des services de communication voix et données Se charge de l'application des polices de sécurité et exploitation des journaux de sécurité	
Veille, prospective et conseil	Conseille et assiste les équipes projets du département IT ou des divisions opérationnelles. Oriente et organise la veille technologique Suit les nouvelles offres et nouveaux entrants Suit la réglementation tarifaire	
Appel d'offres et achat de services télécoms	Définit le cahier des charges (périmètre, services) Réalise le dépouillement des appels d'offres Fait le choix et le suivi des équipements, services, opérateurs et intervenants extérieurs Se charge des Achat, négociation et contractualisation réalisés avec le service des achats, le service juridique et la finance.	
Relations MOE-MOA	Se charge de la définition des besoins Fixe et garantit le niveau de service des réseaux voix et données Assure la coordination générale et la cohérence des projets Télécom et Réseaux.	
Audit et contrôle de gestion	Se charge de l'optimisation et de la maîtrise des coûts télécoms Contrôle la qualité de service des opérateurs Etablit des tableaux de bord Valide et contrôle le budget Telecom et Réseaux	

2/5

COMPETENCES (issues du référentiel de compétence européen)

A5. Architecture Design

Specifies, refines, updates and makes available a formal approach to implement solutions, necessary to develop and operate the IS architecture. Manages the relationship with the business stakeholders to ensure that the architecture is in line with business requirements. Identifies the need for change and the components involved; hardware, software, applications, processes, information and technology platform. Ensures that all aspects take account of interoperability, scalability usability and security.

Level 3

Exploits specialist knowledge to define relevant ICT technology and specifications to be deployed in the construction of multiple ICT projects, applications or infrastructure improvements.

A7. Technology Watching

Explores latest ICT technological developments to establish understanding of evolving technologies.

Devises innovative solutions for integration of new technology into existing products, applications or services or for the creation of new solutions.

Level 4

Exploits wide ranging specialist knowledge of new and emerging technologies, coupled with a deep understanding of the business, to envision and articulate the solutions of the future. Provides expert guidance and advice, to the leadership teams in business and in technology, about potential innovations to support strategic decision-making.

A8. Sustainable Development

Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption.

Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy.

Applies an ICT purchasing and sales policy which fulfils eco-responsibilities.

Level 3

Promotes awareness, training and commitment for the deployment of sustainable development and applies the necessary tools for piloting this approach.

B1. Design and Development

Designs and engineers software and/ or hardware components to meet required specifications, including energy efficiency issues.

Follows a systematic methodology to analyse and build the required components and interfaces.

Performs unit and system testing to ensure requirements are met.

Level 5

Has ultimate responsibility for strategic direction of product, technical architecture or technology development

2/5

COMPETENCES (suite)

C1. User Support

Responds to user requests and issues; records relevant information. Resolves or escalates incidents and optimises system performance. Monitors solution outcome and resultant customer satisfaction.

Level 3

Manages the support process and is accountable for ensuring that agreed service levels are met. Plans resource allocation to ensure that the support is available with respect to the defined service level. Acts creatively, and seeks opportunities for continuous service improvement by analysing root causes. Manages the budget of the support function.

C3. Service Delivery

Takes proactive steps to ensure a stable and secure application and ICT infrastructure.

Updates operational document library and logs all operational events. Maintains monitoring and management tools (i.e. Scripts, Procedures...).

Level 3

Programme the schedule of operational tasks. Manage costs and budget according to the internal procedures and external constraints.

Identify people requirements to resource the operational management of the ICT infrastructure

D9. Personnel Development

Diagnoses individual and group competence, identifying skill needs and skill gaps. Reviews training and development options and selects appropriate methodology taking into account the needs of the individual and the business. Coaches and/ or mentors individuals and teams to address learning needs.

Level 3

Monitors and addressees the development needs of individuals and teams.

D10. Information and Knowledge Management

Identifies and manages structured and unstructured information and considers information distribution policies.

Creates information structure to enable exploitation and optimisation of information for business benefit.

Understands appropriate tools to be deployed to create, extract, maintain, renew and propagate business knowledge in order to capitalise from the information asset

Level 3

Analyses Business processes and associated information requirements and provides the most appropriate information structure

E2. Project and Portfolio Management

Identifies and manages structured and unstructured information and considers information distribution policies.

Creates information structure to enable exploitation and optimization of information for business benefit.

Understands appropriate tools to be deployed to create, extract, maintain, renew and propagate business knowledge in order to capitalize from the information asset

Level 3

Analyses Business processes and associated information requirements and provides the most appropriate information structure.

4/5

COMPETENCES (suite)

E3. Risk Management

Implements the management of risk across information systems through the application of the enterprise defined risk management policy and procedure. Assesses risk to the organizations business, and documents potential risk and containment plans.

Level 3

Decides on appropriate actions required to adapt security and address risk exposure. Evaluates, manages and ensures validation of exceptions; audits ICT processes and environment

E4. Relationship Management

Establishes and maintains positive business relationships between the client and provider (internal or external) deploying and complying with organizational processes.

Maintains regular communication with client/partner/supplier, and addresses needs through empathy with their environment and managing supply chain communications.

Ensures that client/partner/supplier needs, concerns or complaints are understood and addressed in accordance with organizational policy.

Level 2

Positively interacts with clients.

E6. ICT Quality Management

Implements ICT quality policy to maintain and enhance service and product provision.

Plans and defines indicators to manage quality with respect to ICT strategy. Reviews quality performance indicators and recommends enhancements to influence continuous quality improvement.

Level 3

Evaluates quality management indicators and processes based on ICT quality policy and proposes remedial action

E7. Business Change Management

Assesses the implications of new IT solutions. Defines the requirements and quantifies the business benefits.

Manages the deployment of change taking into account structural and cultural issues.

Maintains business and process continuity throughout change, monitoring the impact, taking any required remedial action and refining approach

Level 4

Provides leadership to plan, manage and implement significant IT led business change

E8. Information Security Management

Implements information security policy. Monitors and takes action against intrusion, fraud and security breaches or leaks.

Ensures that security risks are analysed and managed with respect to enterprise data and information.

Reviews security incidents and makes recommendations for continuous security enhancement.

Level 3

Evaluates security management measures and indicators and decides if compliant to information security policy. Investigates and instigates remedial measures to address any security breaches

5/5

COMPETENCES (suite)

MANAGE

E9. IT Governance

Defines, deploys and controls the management of information systems in line with business imperatives.

Takes into account all internal and external parameters such as legislation and industry standard compliance to influence risk management and resource deployment to achieve balanced business benefit.

Level 4

Provides leadership for IT governance strategy by communicating, propagating and controlling relevant processes across the entire IT infrastructure.

La liste des knowledge (connaissances) et des skills (savoirs-faire), correspondant aux compétences sélectionnées pour ce métier, se trouve en annexe.

LIVRABLES

Une architecture réseau et télécoms opérationnelle et performante

INDICATEURS DE PERFORMANCE

- Taux de satisfaction des utilisateurs, notamment en situation de mobilité ou de télétravail
- Nombre d'incidents remontés

PARCOURS PROFESSIONNEL

PROFIL	EXPERIENCE
Bac + 5. Il possède généralement une formation initiale supérieure (grandes écoles d'ingénieurs, grandes écoles télécoms).	4 à 5 d'expérience (internationale de préférence) soit chez un fournisseur, soit chez un utilisateur de taille plus modeste. La promotion interne est également un parcours envisageable.

TENDANCES ET FACTEURS D'EVOLUTION

Les principaux défis auxquels sont confrontés les responsables télécoms aujourd'hui sont :

- des défis économiques : concurrence et délai de mise en œuvre des solutions ;
- des défis techniques : finaliser les convergences fixe-mobile et voix-données-multimédia, la mise en œuvre des hauts débits et le transport des flux sur internet ;
- des défis organisationnels : comment acquérir et maintenir la compétence des équipes télécoms dans un contexte de forte évolution des infrastructures et des équipements tout en garantissant la qualité de service ?
- des défis d'entreprises : la mondialisation, les fusions acquisitions et leur impact sur le réseau, la mobilité inter et intra-entreprise, la gestion de la relation client, le commerce électronique et l'externalisation.
- Des défis d'usage : comment offrir une plus grande mobilité et permettre de passer d'un réseau à l'autre de manière transparente pour l'utilisateur et sécurisée pour l'entreprise ?

1/4

Responsable de production

MISSION

Il dirige l'ensemble des opérations et des moyens de production de l'activité de son entité ; il est responsable du niveau de qualité de service et de sécurité prévus conformément aux attentes des utilisateurs.

Il anime et coordonne l'activité des différents secteurs d'un centre d'exploitation, de façon à garantir un fonctionnement optimum des unités de production (planification, organisation, délais, normes...)

ACTIVITES ET TACHES

Cette fonction n'est plus une fonction exclusivement technique. Elle requiert de plus en plus des activités de gestionnaire et de manager qui sont décrites dans la fiche 7.2 et qui ne seront pas reprises ici.

Production informatique, maintenance	 Supervise : l'ensemble de la production : pilotage, ingénierie système et exploitation. la maintenance des matériels, logiciels d'exploitation et logiciels de base, et optimise les ressources informatiques
Qualité, sécurité	Contrôle la fiabilité du système, la sécurité des données ; le cas échéant, définit des plans de secours. Applique les plans de secours et de sauvegarde Coordonne la réalisation des traitements informatiques dans les meilleures conditions de qualité de délais et de coûts
Communication	Organisation de l'information en cas de situation perturbée, diffusion de l'information nécessaire à l'exercice du métier
Gestion des moyens	 Est force de proposition, tant du point vue technique qu'économique et budgétaire, pour : assurer le maintien au niveau technique adéquat des moyens de production anticiper les évolutions technologiques et leurs impacts sur le dimensionnement de l'environnement de production (par exemple intégration des nouveaux matériels, gestion du parc) Assure le suivi des contrats de prestation

COMPETENCES (issues du référentiel de compétence européen)

7.5 Responsable d'études

1/4

Directeur des Systèmes d'Information Front Office Responsable des études et du développement

MISSION

Il dirige des activités d'étude et de développement qui contribuent à l'évolution et la maintenance du SI. Il travaille essentiellement en regard des processus métiers de l'entreprise.

ACTIVITES ET TACHES

Cette fonction n'est pas une fonction exclusivement technique. Elle requiert des activités de gestionnaire et de manager qui sont décrites dans la fiche 7.2 et qui ne seront pas reprises ici.

manager qui sont décr	nanager qui sont décrites dans la fiche 7.2 et qui ne seront pas reprises ici.											
Intégration et automatisation des processus métiers	Conduit (pour éviter de confondre ave l'étape d'intégration) les études et réalisations de tous nouveaux projets de l'entreprise Propose les initiatives fonctionnelles, techniques et organisationnelles pour assurer l'optimisation des processus métiers des entités (ou structures) utilisatrices Définit les contrats de service (SLA) associés aux processus métiers qui engagent la DSI auprès des métiers											
Stratégie SI	Participe aux décisions concernant la stratégie SI, les évolutions des architectures applicatives et techniques, les choix de logiciels, ainsi que l'organisation de la DSI et des projets											
Planification, organisation et gestion	Pilote la coordination organisationnelle et opérationnelle avec ses partenaires.											
Relations fournisseurs	Entretient une parfaite maitrise des relations avec les fournisseurs, en particulier les éditeurs de logiciels, sociétés de services et cabinets de conseil intervenant sur de grands projets de mise en œuvre de systèmes											

COMPETENCES (issues du référentiel de compétence européen)

	A1. IS and Business Strategy Alignment	Level 4
LAN	Anticipates long term business requirements and determines the IS model in line with organization policy. Makes strategic IS policy decisions for the enterprise, including sourcing strategies.	Provides leadership for the construction and implementation of long term innovative IS solutions.
ط	A2. Service Level Management	Level 4
A.	Defines, validates and makes applicable service level agreements (SLA) and underpinning contracts for services offered. Negotiates service performance levels taking into account the needs and capacity of customers and business.	Provides leadership to amend the enterprise strategy with respect to Service Level Agreements (SLA) in order to achieve forecasted results.

2/1

COMPETENCES (suite)

A3. Business Plan Development

Addresses the design and structure of a business or product plan including the identification of alternative approaches with return on investment propositions. Consider the possible and applicable sourcing models

Presents cost benefit analysis and reasoned arguments in support of the selected strategy.

Ensures compliance of business and technology strategies.

Communicates and sells business plan to relevant stakeholders and addresses political, financial, and organizational interests, including SWOT analysis.

Level 5

Provides leadership for the creation of an information system strategy which meets the requirements of the business.

A5. Architecture Design

Specifies, refines, updates and makes available a formal approach to implement solutions, necessary to develop and operate the IS architecture. Manages the relationship with the business stakeholders to ensure that the architecture is in line with business requirements. Identifies the need for change and the components involved; hardware, software, applications, processes, information and technology platform. Ensures that all aspects take account of interoperability, scalability usability and security.

TENDANCES ET FACTEURS D'EVOLUTION

Annexe 1 : récapitulatif du croisement métiers/compétences

Le groupe RH du CIGREF a travaillé à la distribution des compétences du *e-competence framework* dans les métiers de la nomenclature RH du CIGREF.

La grille qui suit présente de façon concise cette distribution.

- Les compétences IT sont représentées en bleues
- Les métiers IT sont représentés en orange
- Les cases vertes correspondent à l'affectation d'une compétence à un métier.
- Le niveau de compétence pour chaque métier est indiqué dans la case verte.

Annexe 2 : le référentiel de compétences européen

Les informations présentées ci-après constituent le référentiel de compétences IT européen. Il décrit pour toutes les dimensions, l'ensemble des niveaux (*levels*), des connaissances (*knowledge*) et savoir-faire (*skills*).

La description du référentiel, sa structure et son usage, sont disponibles sur le site européen http://ecompetences.eu

Dimension 1	A. PLA	N										
Dimension 2	A1. IS an	d Busines	Strategy	Alignment								
				quirements and determines the I	S model in line	with organisation policy. Makes strategic IS policy						
Dimension 3	Level 1	Level 1 Level 2 Level 3 Level 4 Level 5										
	not applicable	not applicable	not applicable	Provides leadership for the constructi implementation of long term innovati		Provides IS strategic leadership to reach consensus and commitment from the management team of the enterprise.						
Dimension 4			Knowle	edge		Skills						
	K2 trends an organisat K3 the poten K4 the busine	ion	of ICT international	-	application S2 determine requ S3 identify and an S4 contribute to the	developments in business process and technology uirements for processes related to ICT services alyses long term user/customer needs he development of ICT strategy and policy he development of the business strategy						

Dimension 1	A. PLA	N.								
Dimension 2	A.2. Serv	ice Level I	Management							
			makes applicable service level agreements evels taking into account the needs and cap	•) and underpinning contracts for services offered. No of customers and business.	legotiates				
Dimension 3	Level 1	Level 2	Level 3		Level 4	Level 5				
	not applicable	not applicable	Influences and prepares the final Service Level Agreement (SLA) and accounts for the final content	t.	Provides leadership to amend the enterprise strategy with respect to Service Level Agreements (SLA) in order to achieve forecasted results.	not applicable				
Dimension 4			Knowledge		Skills					
	K1 service level agreement documentation K2 how to compare and interpret management data K3 the elements forming the metrics of service level agreements K4 how service delivery infrastructures work K5 impact of service level non-compliance on business performance S1 analyse service provision records S2 evaluate service provision against service level agreement S3 negotiate realistic service level targets S4 use relevant quality management techniques S5 anticipate and mitigate against potential service disruptions									

Dimension 1	A. PLA	'N									
Dimension 2	A3. Busir	ness Plan I	Development								
	return on i reasoned a Communic	investment arguments i	and structure of a business or produ propositions. Considers the possible n support of the selected strategy. E Ils business plan to relevant stakeho sis.	and ap	plicable sourcing models. Prescompliance with business and	sents cost benefit analysis and technology strategies.					
Dimension 3	Level 1	Level 2	Level 3		Level 4	Level 5					
	not applicable	not applicable	Exploits specialist knowledge to provide analysis of market environment etc.	informa	s leadership for the creation of an ation system strategy that meets uirements of the business.	Applies strategic thinking and organisational leadership to exploit the capability of Information Technology to improve the business.					
Dimension 4			knowledge			Skills					
	K1 business plan elements and milestones K2 the present and future market size and needs K3 competition and SWOT analysis techniques (for product features and also the external environment) K4 value creation channels K5 profitability elements K6 the issues and implications of sourcing models K7 financial planning and dynamics S1 address and identify essential elements of product or solution value propositions S2 define the appropriate value creation channels S3 build a detailed SWOT analysis S4 generate short and long term performance reports (e.g. financial, profitability, usage and value creation) S5 identify main milestones of the plan										

Dim	ension 1	A. PLA	N.								
Dim	ension 2	A4. Prod	uct or Pro	ject Planning							
		weaknesse	es, with a cr	current and target status. Estimates of itical approach. Creates structure platity and provides an overview of add	ns; esta	ablishes time scales and milestor	nes. Manages change requests.				
Dim	ension 3	Level 1	Level 2	Level 3		Level 4	Level 5				
		not applicable	not applicable	Acts systematically to document standard and simple elements of product or project.	-	s specialist knowledge to create and in complex documents of the project luct.	Acts with wide ranging accountability to take responsibility for complete project or product plan.				
Dim	ension 4			Knowledge		S	ikills				
		K2 typical KP		or project governance nance indicators) nethods		 S1 identify all potential targets for the product or project S2 define the communication plan; identify key users and create relate documentation S3 produce project and quality plans including milestones S4 ensure and manage adequate information for decision makers 					
						S5 manage the change request proce	ess				

Dimension 1	A. PLAN										
Dimension 2	A5. Architecture Design										
	Specifies, refines, updates and makes available a formal approach to implement solutions, necessary to develop and operate the IS architecture. Manages the relationship with the business stakeholders to ensure that the architecture is in line with business requirements. Identifies the need for change and the components involved; hardware, software, applications, processes, information and technology platform. Ensures that all aspects take account of interoperability, scalability usability and security.										
Dimension 3	Level 1	Level 2	Level 3		Level 4	Level 5					
	not applicable	not applicable	Exploits specialist knowledge to define relevant ICT technology and specifications to be deployed in the construction of multiple ICT projects, applications of infrastructure improvements.	<u> </u>	Acts with wide ranging accountability to define the strategy to implement ICT technology compliant with business need. Takes account of the current technology platform, obsolescent equipment and latest technological innovations	not applicable					
Dimension 4	knowledge				Skills						
	K1 architecture frameworks and systems design tools K2 systems architecture requirements: performance, maintainability, extendibility, scalability, availability, security and accessibility K3 costs, benefits and risks of a system architecture K4 the company's enterprise architecture and internal standards			 S1 provide expertise to help solve complex technical problems and ensures best architecture solutions are implemented S2 use knowledge in various technology areas to build and deliver the enterprise architecture S3 understand the business objectives/divers that impact the architecture component (data, application, security, development etc). S4 assist in communication of the enterprise architecture and standards, principles and objectives to the application teams S5 develop design patterns and models to assist system analysts in designing consistent applications 							

Dimension 1	A. PLAN											
Dimension 2	A6. Application Design Defines the most suitable ICT solutions in accordance with ICT policy and user/customer needs. Accurately estimates development, installation and maintenance of application costs. Selects appropriate technical options for solution design, optimising the balance between cost and quality. Identifies a common reference framework to validate the models with representative users.											
Dimension 3	Level 1 Level 2		Level 3		Level 4	Level 5						
	Contributes to the design and general functional specification and interfaces.	Organises the overall planning of the design of the application	application is co	n and others actions in ensuring that the rrectly integrated within a complex environment th user/customer needs	not applicable	not applicable						
Dimension 4		knowledge		Skills								
	K1 requirements modelling and K2 software developments me agile methods, reverse eng K3 metrics related to applicati K4 user interface design princi K5 languages for formalising for K6 existing applications and re K7 DBMS, Data Warehouse, D	ethods and their rationale (e.g. gineering, etc.) on development iples unctional specification	prototyping,	S1 identify customers, users & stakeholders S2 collect, formalise and validate functional and no-functional requirements S3 apply estimation models and data to evaluate costs of different software lifecycle phases S4 evaluate the use of prototypes to support requirements validation S5 design, organise and monitor the overall plan for the design of application S6 design functional specification starting from defined requirements S7 evaluate the suitability of different application development methods for the current scenario								

Dimension 1	A. PLA	A. PLAN						
Dimension 2	A7. Tech	nology W	atching					
	Explores latest ICT technological developments to establish understanding of evolving technologies. Devises innovative solutions for integration of new technology into existing products, applications or services or for the creation of new solutions.							
Dimension 3	Level 1	Level 2	Level 3	Level 4 Exploits wide ranging specialist knowledge of new and emerging technologies, coupled with a deep understanding of the business, to envision and articulate the solutions of the future. Provides expert guidance and advice, to the leadership teams in business and in technology, about potential innovations to support strategic decision-making. Level 5 Provides strategic leadership. Envisions and articulates solutions and directs the organisation to build and explosion and articulates future solutions and directs the organisation to build and explosion and articulates future solutions and directs the organisation to build and explosion and articulates future solutions and directs the organisation to build and explosion and articulates future solutions and directs the organisation to build and explosion and articulates future solutions and directs the organisation to build and explosion and articulates future solutions and directs the organisation to build and explosion and articulates future solutions and directs the organisation to build and explosion and articulates future solutions and directs the organisation to build and explosion and articulates future solutions and directs the organisation to build and explosion and articulates future solutions and directs the organisation to build and explosion and articulates future solutions are solved for the future are sol				
	not applicable	not applicable	not applicable					
Dimension 4			know	edge	Skills			
	K1 emerging technologies and the relevant market applications K2 market needs K3 relevant sources of information (e.g. magazines, conferences and events, newsletters, opinion leaders, etc.) K4 the rules of discussions in web communities			magazines, conferences and events,	 S1 monitor sources of information and continuously follow the most promising S2 identify vendors and providers of the most promising solutions; evaluates, justifies and proposes the most appropriate. S3 identify business advantages and improvements of adopting emerging technologies S4 create a proof of concept 			

Dimension 1	A. PLA	A. PLAN						
Dimension 2	A8. Sust	ainable D	evelopment					
	Estimates the impact of ICT solutions in terms of eco responsibilities including energy consumption. Advises business and ICT stakeholders on sustainable alternatives that are consistent with the business strategy. Applies an ICT purchasing and sales policy which fulfils eco-responsibilities.							
Dimension 3	Level 1	Level 2	Level 3		Level 4	Level 5		
	not applicable	not applicable	Promotes awareness, training and commitment for deployment of sustainable development and applie necessary tools for piloting this approach.		Defines objective and strategy of sustainable IS development in accordance with the organisation's sustainability policy.	not applicable		
Dimension 4			knowledge	Skills				
	K1 metrics and indicators related to sustainable development K2 Corporate social responsibility (CSR) of stakeholders within the IT infrastructure			S1 monitor and measures the IT energy consumption S2 apply recommendations in projects to support latest sustainable development strategies S3 master regulatory constraints and international standards related to IT sustainability				

Dimension 1	B. BU	ILD					
Dimension 2	B1. Desi	gn and Devel	opment				
	Designs and engineers software and/ or hardware components to meet required specifications, including energy efficiency issues. Follows a systematic methodology to analyse and build the required components and interfaces. Performs unit and system testing to ensure requirements are met.						
Dimension 3	Level 1	Level 2	Level 3		Level 4	Level 5	
	not applicable	Systematically develops small components.	Acts creatively to develop and integrate components into a larger product.	procedures an	lexity by developing standard architectures in support of uct development.	Has ultimate responsibility for strategic direction of product, technical architecture or technology development	
Dimension 4			knowledge		Skills		
	K1 appropriate software programs/ modules, DBMS and programming languages K2 hardware components, tools and hardware architectures K3 functional & technical designing K4 state of the art technologies K5 programming languages K6 Power consumption models of software and/or hardware				S1 explain and communicate the design/development to the customer S2 perform and evaluate test results against product specifications S3 apply appropriate software and/or hardware architectures S4 design and develop hardware architecture, user interfaces, business software components and embedded software components S5 manage and guarantee high levels of cohesion and quality in complex software developments S6 use data models		

Dimension 1	B. BU	ILD					
Dimension 2	B2. Syste	ems Integration					
	Installs additional hardware, software or sub system components into an existing or proposed system. Complies with established processes and procedures (e.g. configuration management), taking into account the specification, capacity and compatibility of existing and new modules to ensure integrity and interoperability. Verifies system performance and ensures formal sign off and documentation of successful integration.						
Dimension 3	Level 1	Level 2	Level 3		Level 4	Level 5	
	not applicable	Acts systematically to identify compatibility of software and hardware specifications. Documents all activities during installation and records deviations and remedial activities.	Accounts for own and others actions in the integration process. Complies with appropriate standards and change control procedures to maintain integrity of the overall system functionality and reliability.		Exploits wide ranging specialist knowledge to create a process for the entire integration cycle, including the establishment of internal standards of practice. Provides leadership to marshal and assign resources for programmes of integration.	not applicable	
Dimension 4		knowledge			Skills		
	K1 old, existing and new hardware components/ software programs/ modules K2 the impact that system integration has on existing system/ organisation K3 interfacing techniques between modules, systems and components K4 integration testing techniques			S1 measure system performance before, during and after system integration S2 document and record activities, problems and related repair activities S3 match customers' needs with existing products S4 verify that integrated systems capabilities and efficiency match specifications S5 secure/ back-up data to ensure integrity during system integration			

Dimension 1	B. BUILD						
Dimension 2	B3. Testing						
	Constructs and executes systematic test procedures for IT systems or customer usability requirements to establish compliance with design specifications. Ensures that new or revised components or systems perform to expectation. Ensures meeting of internal, external, national and international standards; including health and safety, usability, performance, reliability or compatibility. Produces documents and reports to evidence certification requirements.						
Dimension 3	Level 1	Level 2	Level 3 Level 4 Level			Level 5	
	Performs simple tests in strict compliance with detailed instructions	Organises test programmes and builds scripts to stress test potential vulnerabilities. Records and reports outcomes providing analysis of results.	Exploits specialist knowledge to supervise complex testing programmes. Ensures tests and results are documented to provide input to subsequent process owners such as designers, users or maintainers. Accountable for compliance with testing procedures including a documented audit trail				
Dimension 4		knowledge		Skills			
	K2 the lifecycle of K3 the different s stress etc.)	frastructure and tools to be used in the factoring process orts of tests (functional, integration, ponternational standards defining quality	erformance, usability,	S1create and manage a test plan S2 manage and evaluate the test process S3 design tests of ICT systems S4 prepare and conduct tests of ICT systems S5 report and document tests and results			

Dimension 1	B. BUILD						
Dimension 2	B4. Solution Deplo	yment					
	Following predefined general standards of practice carries out planned necessary interventions to implement solution, including installing, upgrading or decommissioning. Configures hardware, software or network to ensure interoperability of system components and debugs any resultant faults or incompatibilities. Engages additional specialist resources if required, such as third party network providers. Formally hands over fully operational solution to user and completes documentation recording all relevant information, including equipment addressees, configuration and performance data.						
Dimension 3	Level 1	Level 2	Level 3		Level 4	Level 5	
	Performs under guidance and in accordance with detailed instructions, the removal or installation of individual components.	Acts systematically to build or deconstruct system elements. Identifies non performing components and establishes root cause of failure within the overall solution. Provides support to less experienced colleagues.	provision activities including comprehensive communications with client. Exploits specialist not not			not applicable	
Dimension 4		knowledge		Skills			
	 K1 performance analysis techniques K2 techniques related to problem management (operation, performance, compatibility) K3 software packaging and distribution methods and techniques K4 the impacts of deployment on the current architecture K5 the technologies and standards to be used during the deployment 			 S1 organise deployment workflow and product roll-out activities S2 organise and plan beta-test activities, testing solution in its final operational environment S3 configure components at any level to guarantee correct overall interoperability S4 identify and engage expertise needed to solve interoperability problems S5 organise and control initial support service provision including user training during system start-up S6 organise population of data bases and manage data migration 			

Dimension 1	B. BUILD						
Dimension 2	B5 Documentat	ion Production					
	Produces documents describing products, services, components or applications to establish compliance with relevant documentation requirements. Selects appropriate style and media for presentation materials. Creates templates for document-management systems. Ensures that functions and features are documented in an appropriate way. Ensures that existing documents are valid and up to date.						
Dimension 3	Level 1	Level 2		Level 3	Level 4	Level 5	
	Uses and applies standards to define document structure.	Determines documentation requirements taking into account the purpose and environment to which it applies.	•	pts the level of detail according to the objective ne documentation and the targeted population.	not applicable	not applicable	
Dimension 4		knowledge		Skills			
	K2 tools for multimedi K3 different technical	n, editing and distribution of professional documer ia presentation creation documents required for designing, developing and s, applications and services	S1 observe and deploy effective use of corporate standards for publications S2 prepare templates for shared publications S3 organise and control content management workflow S4 keep publications aligned to the solution during the entire lifecycle				

Dimension 1	C. RUN						
Dimension 2	C1. User Support						
	•	quests and issues; records relevant infor ors solution outcome and resultant cust		n. Resolves or escalates incidents and opt satisfaction.	imises system	1	
Dimension 3	Level 1	Level 2	Level 3 Level 4			Level 5	
	Routinely interacts with users, applies ICT-product, basic knowledge and skill to respond to user requests. Solves simple incidents, following prescribed procedures.	Systematically interprets user problems identifying the solutions and possible side effects. Uses experience to identifying user problems and interrogates database for potential solutions. Escalates complex or unresolved incidents to senior experts. Records and tracks user support procedures from outset to conclusion.				not applicable	
Dimension 4		knowledge		Skills			
	K1 relevant ICT User applications K2 database structures and content organisation K3 corporate escalation procedures K4 software distribution methods and procedures for fix application and fi transmission methodologies applicable to software fixes K5 sources of information for potential solutions			 S1 effectively interrogate users to establish symptoms S2 analyse symptoms to identify broad area of user error or technical failure S3 deploy support tools to systematically trace source of error or technical failure S4 clearly communicate with end users and provide instructions on how to progress issues S5 record and code issues to support growth and integrity of online support tools 			

Dimension 1	C. RUN							
Dimension 2	C2. Chan	C2. Change Support						
	Implements and provides guidance for the evolution of an IT solution. Efficiently controls and schedules software or hardware modifications to prevent multiple upgrades creating unpredictable outcomes. Minimises service disruption as a consequence of changes and adheres to defined service level agreement (SLA).							
Dimension 3	Level 1	Level 2	Level 3 Level 4 L			Level 5		
	not applicable	During change, acts systematically to respond to day by day operational needs and react to them, avoiding service disruptions and maintaining coherence to service level agreement (SLA).	approximation and a second and a			not applicable		
Dimension 4		knowledge		Skills				
	K1 functional specifications of the information system K2 the existing ICT application technical architecture K3 how business processes are integrated and their dependency upon ICT applications K4 change management tools and techniques			 S1 share functional and technical specifications with ICT teams in charge of the maintenance and evolution of ICT solutions S2 manage communications with ICT teams in charge of the maintenance and the evolution of information systems solutions S3 analyse the impact of functional/technical changes on users S4 anticipate all actions required to mitigate the impact of changes (training, documentation, new processes) 				

Dimension 1	C. RUN	C. RUN							
Dimension 2	C3. Service D	elivery							
	·	Takes proactive steps to ensure a stable and secure application and ICT infrastructure. Updates operational document library and logs all operational events. Maintains monitoring and management tools (i.e. Scripts, Procedures).							
Dimension 3	Level 1	Level 2		Level 3	Level 4	Level 5			
	Acts under guidance to record and track reliability data.	Systematically analyses performance data and communicates findings to senior experts. Escalates potential service level failures and recommends actions to improve service reliability. Tracks reliability data against service level agreement.	Ma pro Ide	ogramme the schedule of operational tasks. nage costs and budget according to the internal occurred and external constraints. ntify people requirements to resource the erational management of the ICT infrastructure	not applicable	not applicable			
Dimension 4		knowledge		Skills					
	K1 how to interpret IT service delivery requirements K2 best practices and standards in IT service delivery. K3 how to monitor service delivery K4 how to record service delivery actions and able to identify failures			S1 apply the processes which comprise the organisations IT service delivery strategy S2 fill in and complete documentation used in IT service delivery S3 analyse service delivery provision and report outcomes to senior colleagues					

Dimension 1	C. RUI	C. RUN						
Dimension 2	C4. Probl	C4. Problem Management						
	Identifies and resolves the root cause of incidents. Takes a proactive approach to the root cause of ICT problems. Deploys a knowledge system based on recurrence of common errors.							
Dimension 3	Level 1	Level 2	Level 3		Level 4	Level 5		
	not applicable	Identifies and classifies incident types and service interruptions. Records incidents cataloguing them by symptom and resolution.	Exploits specialist knowledge and in-depth understanding of the ICT infrastructure and problem management process to identify failures and resolve with minimum outage. Makes sound decisions in emotionally charged environments on appropriate action required to minimise business impact. Rapidly identifies failing component, selects alternatives such as repair, replace or reconfigure.		Provides leadership and is accountable for the entire problem management process. Schedules and ensures well trained human resources, tools, and diagnostic equipment are available to meet emergency incidents. Has depth of expertise to anticipate critical component failure and make provision for recovery with minimum downtime. Constructs escalation processes to ensure that appropriate resources can be applied to each incident.	not applicable		
Dimension 4			knowledge		Skills			
	 K1 the organisations overall ICT infrastructure and key components K2 the organisations reporting procedures K3 the organisations critical situation escalation procedures K4 the application and availability of diagnostic tools K5 the link between system infrastructure elements and impact of failure on related business processes. 			 S1 monitor progress of issues throughout lifecycle and communicate effectively S2 identify potential critical component failures and take action to mitigate effects of failure S3 conduct risk management audits and act to minimise exposures S4 allocate appropriate resources to maintenance activities, balancing cost and risk S5 communicate at all levels to ensure appropriate resources are deployed internally or externally to minimise outages 				

Dimension 1	D. ENA	D. ENABLE							
Dimension 2	D1. Information Security Strategy Development Defines and makes applicable a formal organisational strategy, scope and culture to maintain safety and security of information.								
	Provides the foundation for Information Security Management, including role identification and accountability (ref D.2). Uses defined standards to create objectives for information integrity, availability, and data privacy.								
Dimension 3	Level 1	Level 2	Level 3	Level 4		Level 5			
	not applicable	not applicable	not applicable	Exploits depth of expertise and leve standards and best practices.	rages external	Provides strategic leadership to embed information security into the culture of the organisation.			
Dimension 4			knowle	dge	Skills				
	Knowledge K1 the potential and opportunities of relevant standards and best practices K2 the impact of legal requirements on information security K3 the information strategy of the organisation K4 possible security threats				S1 develop and critically analyse the company strategy for information security S2 define, present and promote an information security policy for approval by the senior management of the organisation S3 apply relevant standards, best practices and legal requirements for information security S4 anticipate required changes to the organisations information security strategy and formulate new plans S5 propose effective contingency measures				

Dimension 1	D. ENA	ABLE							
Dimension 2	D2. ICT C	Quality Str	ategy Dev	elopment					
	between c quality ma	efines, improves and refines a formal strategy to satisfy customer expectations and improve business performance (balance etween cost and risks). Identifies critical processes influencing service delivery and product performance for definition in the ICT uality management system (ref D.4). Uses defined standards to formulate objectives for service management, product and process uality. Identifies ICT quality management accountability.							
Dimension 3	Level 1	Level 2	Level 3	Level 4		Level 5			
	not applicable	not applicable	not applicable	Exploits wide ranging specialist know and authorise the application of extended practices.	=	Provides strategic leadership to embed ICT quality (i.e. metrics and continuous improvement) into the culture of the organisation.			
Dimension 4			knowl	edge	Skills				
	CMMI, IS		mplications fo	ustry frameworks - COBIT, ITIL, r corporate ICT governance isation	S1 define an ICT quality policy to meet the organisations standards of performance and customer satisfaction objectives S2 identify quality metrics to be used S3 apply relevant standards and best practices to maintain information quality				

Dimension 1	D. ENA	ABLE								
Dimension 2	D3. Educ	ation and Training Provision								
	training pr	Defines and implements ICT training policy to address organisational skill needs and gaps. Structures, organises and schedules training programmes and evaluates training quality through a feedback process and implements continuous improvement. Adapts training plans to address changing demand.								
Dimension 3	Level 1	Level 2		Level 4	Level 5					
	not applicable	Organises the identification of training needs; collates organisation requirements, identifies, selects and prepares schedule of training interventions.	Acts creatively to analyse skills gaps; elaborates specific requirements and identifies potential sources for training provision. Has specialist knowledge of the training market and establishes a feedback mechanism to assess the added value of alternative training programmes.							
Dimension 4		knowledge		Skills						
	classroon K2 the comp	ite pedagogical approaches and education deliv n, online, text, dvd etitive market for educational offering eeds analysis methodologies	very methods e.g.							

Dimension 1	D. ENA	ABLE					
Dimension 2	D4. Purcl	hasing					
	supplier id and their p	entification, proposal analysis, eval	luation of the energy oplier selection and c	efficiency and env	sub processes: specification requirem vironmental compliance of products, so a construct that the entire purchasing p	uppliers	
Dimension 3	Level 1	Level 2	Level 3		Level 4	Level 5	
	not applicable	Understands and applies the principles of the procurement process; places orders based on existing supplier contracts. Ensures the correct execution of orders, including validation of deliverables and correlation with subsequent payments.	Exploits specialist know purchasing process, en commercial relationshi Selects suppliers, produ evaluating performance and quality. Decides co and complies with orga	suring positive ps with suppliers. ucts and services by e, cost, timeliness ntract placement	Provides leadership for the application of the organisations procurement policies and makes recommendations for process enhancement. Applies experience and procurement practice expertise to make ultimate purchasing decisions.	not applicable	
Dimension 4		knowledge			Skills		
	K2 own orga K3 financial i	rchase contract Terms and conditions nisation purchasing policies models e.g. discount structures nt market for relevant products or services and implications of outsourcing services	9 \$	S1 interpret product/service specifications S2 negotiate terms, conditions and pricing S3 analyse received proposals/ offers S4 manage the purchasing budget S5 lead purchase process improvement S6. Analyse the energy efficiency and environmental-related aspects of a proposal			

Dimension 1	D. ENA	BLE								
Dimension 2	D5. Sales	Proposal Development								
	Develops technical proposals to meet customer solution requirements and provide sales personnel with a competitive bid. Underlines the energy efficiency and environmental impact related to a proposal. Collaborates with colleagues to align the service or product solution with the organisations capacity to deliver.									
Dimension 3	Level 1	Level 2	Level	3	Level 4	Level 5				
	not applicable	Organises collaboration between relevant internal departments, for example, technical, sales and legal. Facilitates comparison between customer requirement and available 'off the shelf' solutions.	Acts creatively to deve incorporating a comple Customises solution in technical environment feasibility and technica customer offer.	ex solution. a complex and ensures	Interprets and influences customer needs and the reference business contexts, proposes consultancy projects, in order to provide the ideal customer solutions, i.e. behaves as a "consultative seller"	not applicable				
Dimension 4		knowledge		Skills						
	K3 legal requ	adopted sales and marketing techniques		S1 construct the framework for proposal documentation S2 co-ordinate and facilitate multidiscipline teams contributing to the proposal S3 interpret the terms and conditions of the tender documentation S4 evaluate the strengths and weaknesses of potential competitors S5 ensure that a proposal is of high quality and is submitted on time S6 Communicates the energy efficiency and environmental-related aspects of a proposal						

Dimension 1	D. ENA	D. ENABLE							
Dimension 2	D6. Chanı	nel Manag	ement						
	Develops the strategy for managing third party sales outlets. Ensures optimum commercial performance of the value-added resellers (VAR) channel through the provision of a coherent business and marketing strategy. Defines the targets for volume, geographic coverage and the industry sector for VAR engagements and structures incentive programmes to achieve complimentary sales results.								
Dimension 3	Level 1	Level 2	Level 3		Level 4	Level 5			
	not applicable	not applicable	Acts creatively to influence the establishment of network. Manages the identification and assessm potential VAR members and sets up support prod VARs managed to maximise business performance.	nent of cedures.	Exploits wide ranging skills in marketing and sales to create the organisations VAR strategy. Establishes the processes by which VARs will be managed to maximise business performance	not applicable			
Dimension 4			knowledge	Skills					
	K1 the competition (what and where) K2 the market distribution across the field K3 sales channel typologies (e.g. direct sales, VAR, web marketing) K4 incentive policies K5 user experience of each channel type				S1 choose the best sales channel according to the product or solution being delivered S2 define discounts according to the competitive environment S3 select value added retailers based on thorough analyses, plan and make contacts S4 monitor and supervise channel performances in line with sales forecast and able to define corrective actions if necessary S5 apply web marketing methods				

Dimension 1	D. ENA	BLE								
Dimension 2	D7. Sales	Managem	ent							
	organisatio efficient res	Drives the achievement of sales results through the establishment of a sales strategy. Demonstrates the added value of the organisations products and services to new or existing customers and prospects. Establishes a sales support procedure providing efficient response to sales enquiries, consistent with company strategy and policy. Establishes a systematic approach to the entire sales process, including understanding client needs, forecasting, prospect evaluation, negotiation tactics and sales closure.								
Dimension 3	Level 1	Level 2	Level 3	Lev	el 4	Level 5				
	not applicable	not applicable	Contributes to the sales process by effectively presenting products or services to clients.	Assesses and estimat strategies to deliver of Decides and allocates and adjusts incentive conditions.	company results. s annual sales targets	Assumes ultimate responsibility for the sales performance of the organisation. Authorises resource allocation, prioritises product and service promotions, advises board directors of sales performance.				
Dimension 4			knowledge		Skills					
	K2 company s K3 market tre K4 legal, finan K5 project ma	pecific process nds and own s icial and contra inagement pro		,	 S1 develop strong co-operation between customers and own organisation S2 keep abreast of market news e.g. risks, changes, innovations and communicate to internal business units, to improve service and product portfolio S3 react proactively to customer business changes and communicate them internally S4 generate sustainable customer relationships S5 analyse sales performance to build forecasts and develop a tactical sales plan 					

Dimension 1	D. ENA	ABLE								
Dimension 2	D8. Contr	act Management								
	time, meet recovery pl	Provides and negotiates contract in accordance with organisational processes. Ensures that supplier deliverables are provided on time, meet quality standards and comply with agreed service levels. Addresses non-compliance escalates significant issues, drives recovery plans and if necessary amends contracts. Maintains budget integrity. Assesses and addresses supplier compliance to legal, health and safety and security standards. Actively pursues regular supplier communication.								
Dimension 3	Level 1	Level 2	Level 3		Level 4	Level 5				
	not applicable	Acts systematically to monitor contract compliance and promptly escalate defaults.	Evaluates supplier contract monitoring performance inc performance of the complete Influences the terms of contract.	licators. Assures e supply chain.	Provides Leadership for supplier contract compliance and is the final escalation point for issue resolution.	not applicable				
Dimension 4		knowledge		Skills						
	K2 company	e service level agreements policy for contract management lations applicable to ICT contracts		S1 foster positive relationships with suppliers and customers S2 negotiate contract terms and conditions S3 apply judgment and flexibility in contract negotiations compliant with internal rules and policies
